SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (R1) (U)

Commanding General, II Field Force Vietnam, ATTN: AVFC-RE-H APO 96266  
Commanding General, United States Army Vietnam, ATTN: AVHGC(DST) APO 96375  
Commanding General, United States Army Pacific, ATTN: GPOP-DT APO 96558

1. (C) Section 1, Operations: Significant Activities

a. (C) Introduction: During the reporting period 1 May 1969 to 30 June 1969, units under the operational control of the Commanding General, 9th Infantry Division conducted offensive operations in Dinh Tuong, Long An, Go Cong, Kien Phong, Kien Tuong, Vinh Binh, Gia Dinh, and Kien Hoa Provinces. There were four major operations during this period, Operation SPEEDY EXPRESS (IV Corps Dry Season Campaign) terminated 312400H May 1969, when Operation RICE FARMER (IV Corps Wet Season Campaign) began; Operation QUYET THANG and Operation TOAN THANG III continued from the previous quarter. As in the last reporting period, the enemy continued his resupply and reorganization missions with emphasis on recruiting and winning the support of the local population in contested areas. In addition to attempting to undermine GVN Pacification efforts, he further intensified his efforts to retain control of those areas under his domination. The enemy was extremely reluctant to enter into decisive engagements, and in an attempt to survive, has remained in a fragmented configuration. The 9th Infantry Division continued Airmobile Assaults, Eagle Flight, Checkerboard, Bushmaster, Cordon and Search, Reconnaissance in Force, and Special Night Operations as primary combat operational techniques. Operations were designed to destroy the enemy, to deny him the opportunity to reorganize and redistribute his forces and resources, and to impede his efforts to launch offensive operations against GVN forces and populated areas within the 9th Infantry Division TAOI. The enemy's offensive activity was characterized by harassment of outposts, attacks by fire, and extensive use of mines and booby traps.

b. (C) Organization

(1) The 9th Infantry Division provisionally reorganized one brigade headquarters and headquarters company, five infantry battalions, and one artillery battalion from the riverine configuration to standard light infantry and artillery MTOE during the period 1 May through 1 June 1969. Effective 1 June 1969, USARPAC GO 407, dated 23 May 1969 granted the authority to reorganize the following units with the manning strengths indicated:

~~CONFIDENTIAL~~

6th Bn 31st Inf	43	2	875	920
1st Bn 11th Arty	44	3	479	526

(2) The 6th Battalion, 77th Artillery and the 31st Transportation Company (Medium Boat) were inactivated, effective 1 June 1969, by authority of USARPAC GO 407.

(3) Effective 12 June 1969, the 9th Infantry Division was directed to prepare redeployment plans as the first step to the Vietnamization Program. Plans were drafted for the 2d Brigade and supporting units to redeploy to CONUS for inactivation; the 3d Brigade to remain in Vietnam and be reorganized as a separate light infantry brigade; and the 1st Brigade, Division Base (-), Division Artillery HHB, 1st Battalion 11th Artillery (105mm), and 1st Battalion 84th Artillery (155mm/8") to redeploy to USARHAW.

(4) The 9th Infantry Division received tentative approval from the Deputy G3 at USARV for the following units to be included in the organization of the 3d Brigade:

<u>UNIT</u>	<u>STRENGTH</u>
HHC	219
Sig Co	102
Engr Co	165
Spt Bn	541
FA Bn	641
Inf Bn (3)	2760

30 June 1969, RCS CSFOR-65 (RI) (U)

equipment for four water supply points plus additional men to operate engineer construction equipment. Additional spaces were requested for the Signal Company because the Signal Company as organized could not provide sufficient VHF communications to support four maneuver battalions. The additional maintenance and support troops were requested to support the mechanized infantry battalion as well as to provide graves registration, POL, and bath support. Three additional spaces were requested for the administration company to provide legal personnel which are required under the Military Justice Act of 1968.

(5) Organizational Structure - Incl 1

(6) Roster of Key Personnel - Incl 2

(7) Division TAOI - Incl 3

c. (C) Personnel and Administration

(1) General Data: See Inclosure 4 for information and statistics concerning the following:

(a) Maintenance of Unit Strength

(b) Personnel Management

(c) Development and Maintenance of Morale

(d) Maintenance of Discipline, Law and Order

(2) Significant Activities: The Division Headquarters Commandant Section continued its normal functions of managing the physical aspects of the Division Headquarters complex. These activities included building maintenance, landscaping, parade and ceremony preparations, control of officer billeting, and supervision of headquarters mess and supply operations. There were no significant new activities undertaken by this section during the reporting period.

d. (C) Intelligence

(1) Discussion

(a) General: This reporting period includes two phases of enemy activity; neither phase was very distinct. The first phase was a continuation of the April period of inactivity, which was characterized by two or three high points and a number of large contacts within each of the provinces as enemy units re-grouped for specific offensive operations. This gradually evolved into a period of even lower activity. This phase was terminated on 13 June upon the announcement of the withdrawal of two brigades of the division from the Republic of

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (R1) (U)

Vietnam. At that time the Viet Cong switched to a propaganda campaign and instituted sporadic, limited attacks by fire throughout the area of operations of the 9th Infantry Division. Apparently the enemy desired to cause maximum casualties with minimum casualties and at the same time demonstrated for propaganda purposes some degree of initiative. The first high point of the reporting period occurred on 12 May, when a significant number of US and ARVN installations received mortar, rocket, and recoilless rifle fire. The following day the 267 Battalion of SR-2 was contacted in Long An Province by elements of the 3d Brigade and the 50th ARVN Infantry Regiment. This contact accounted for 91 enemy killed. Activity then declined until the following week when elements of the 1st Brigade, operating in Dinh Tuong Province, contacted the 261 A Battalion. Documents captured during this contact indicated that the 261 A Battalion was being supported by the 514X Sapper Company and the 522X Rocket Company. During the contact enemy dead numbered 105. Nineteen AK 47s and several pounds of documents were captured. The next large contact occurred in Kien Hoa Province. On 23 May elements of the 2d Brigade contacted the C1 Company of the 516 Battalion in Ham Long District. Eighty enemy troops were killed. After that contact activity within the TAOI declined steadily. Agent reports and prisoners kept up a barrage of information that a massive offensive was imminent, however surveillance media indicated the opposite. Thus, the month ended with a few scattered contacts throughout the TAOI. The first confirmed evidence of rockets being used in Dinh Tuong Province occurred on 21 May when Dong Tam Base was shelled with 107mm rockets. Thus a new capability was now available to the enemy in the Province. On 5 June the enemy initiated another high point with 22 enemy initiated incidents, including 21 attacks by fire. From 14 June until the end of the month a near enemy stand down existed. All indications were that the enemy was divided into cell, squad, and platoon size elements and was avoiding contact. Reports continued to flourish about a pending massive offensive, but as time passed, the dates for the offensive changed and June faded into July without any offensive taking place.

(b) Long An Province: During the first ten days in May enemy activity remained relatively light in Long An. The number of interdiction incidents indicated a coming offensive. Between 2 and 8 May there were 10 such incidents, most of them occurring on Route 224 near the junction of Route 228. In that same general area elements of the 3d Brigade and the 50th ARVN Regiment, made contact with the 267 Battalion on 13 May. There were 91 VC killed in the battle. This was the first contact in recent months with the 267 Battalion. Enemy activity reached its peak for the year in the week between 9 and 15 May. Documents captured in April revealed that the 267 and the 508 Battalions intended a coordinated attack on Thu Thua. Other documents and PW reports also indicated that the enemy was preparing a high point to celebrate Ho Chi Minh's birthday. However, the contact with allied forces is believed to have spoiled the enemy's plans. Around 15 May intelligence indicated that the enemy was withdrawing from contact and conducting resupply, replacement and training

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (R1) (U)

activities. On 16 May a PW from the 308 Battalion said that his unit was returning to Ba Thu, Cambodia, for replacements. A PW from the 265 Battalion indicated that his battalion was avoiding contact. Pham Van Bui, the new CO of the Dong Phu Battalion, was apprehended on 22 May. He stated that as a result of heavy casualties between February and May 1969, the strength of the battalion was 120 men, morale of the Battalion was low, and that no replacements had been received prior to his capture. He further stated that his men were living under hardship conditions because the local civilians were afraid to give them any aid. At the time of his capture, 99% of his men were NVA troops. He was assigned as Battalion CO on 17 May. During February and March he was an advisor to the 520 Battalion. The strength of the 520 Battalion at that time was 160 men, 30 were NVA. The enemy throughout the province appeared to have broken down into squad size elements to avoid contact. Long An, however, remained the most active province in the TAOI during the month of May. A high point of eight attacks by fire occurred during the night of 5-6 June. Following the high point enemy activity remained moderately heavy for five days. Another high point occurred on 19-21 June, again consisting mainly of attacks by fire. A PW from the 308 Battalion captured on 18 June stated that the 2d and 3d companies of the battalion were in Ba Thu, Cambodia, but were currently moving to Ben Luc and Thu Thua Districts. Subsequent PWs and a contact confirmed this move. The contact was on 29 June, and five VC were killed and two PWs apprehended. One of the PWs was the battalion executive officer. He stated that the Battalion Commander and the Political Officer were killed in the contact. On 27 June elements of the 3d Brigade identified the 267 Battalion in a contact in the Kien Tuong - Long An border area. Twenty-four VC were killed in the engagement. During the last week of June enemy activity dropped to a new low. The enemy remained scattered; however, there were new indications of a pending high point. Documents captured on 28 June may have given some indication of the enemy's future plans. The documents revealed the following statements from the Revolutionary Council of Southern Long An Province: (1) To eliminate the entire administrative machinery created by the puppet government, (2) To interdict all forms of service and support given to the puppet administrative agencies, (3) To adopt a clemency policy for all individuals working for the administrative agencies who revert to the revolutionary authorities and, (4) To take appropriate actions against all individuals who act against these orders.

(c) Dinh Tuong Province: Except for a contact with an unidentified unit NE of Giao Duc on 1 May, which resulted in 23 VC KIA, activity during the first weeks in May was at a low level in the Province. There was a surge of enemy activity on 11 May 69, primarily attacks by fire. On the evening of 11-12 May several US/ARVN military installations, including Dong Tam Base, were attacked by fire. While indications were that the main force units were dispersed, the VC appeared to have initiated an offensive consisting principally of attacks by fire against the district/provincial capitals, key military installations and LOCs. The relatively high level of activity and attacks by fire

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (R1) (U)

continued for about 12 days. It appeared that some effort was made to mass the main force battalions toward the end of the period. This was evidenced by a contact on 22 May in which 105 VC from the 261 A Battalion, the 514X Mortar Company and the 522X Rocket Company were killed. The offensive then tailed off and no attacks by fire occurred in the province for the next two weeks. During this lull the 334 and 332 Sapper Companies combined to become the 334 Sapper Company, subordinate to the 2d Dong Thap Regiment. The 336 and the 340 Sapper Companies combined to form the 336 Sapper Company. During the 21 May offensive the use of 107mm rockets was confirmed for the first time, thus demonstrating an increased capability. The enemy initiated two small offensives on the nights of 5-6 and 20-21 June, primarily attacks by fire. Contacts were light and scattered for the entire month with no contacts with major units. A PW captured on 17 June claimed that he was the Finance Officer for MR-2 Headquarters. Intelligence indicated that toward the end of June the Binh Duc Artillery Battalion fragmented into small teams in preparation for attacks by fire on Dong Tam Base. The enemy's offensive effort for the period 1 May - 30 June was periodic attacks by fire.

(d) Kien Hoa Province: The month of May began quietly in Kien Hoa Province. Attacks by fire began with the general surge of activity throughout the Division TAOI on 9 May. Contacts were light and scattered until 10 May when the 580 Battalion was contacted near Ap Phuoc Hau. This was the identification of a new unit that had been reported by agent reports since early February. Thirty-nine enemy were killed and one PW apprehended during the contact. The PW stated that he was the Executive Officer of the Battalion and that missions of the unit were the security of the Ben Tre City Hamlets, attacking New Life Hamlets and setting up ambushes. After 15 May enemy activity dropped to a low level for the remainder of the month. There were only three attacks by fire in the province during that period. On 23 May elements of the 2d Brigade engaged and killed 102 VC from C1 Company of the 516 Battalion. During the month of June enemy initiated incidents were primarily directed against GVN personnel and installations. Contact was sporadic until 10 June when elements of the 2d Brigade killed 32 VC from the 3d Company of the 516 Battalion. Reports began appearing that the 516 Battalion had split into the 516 A and 516 B Battalions. Recurring reports and usually reliable intelligence had by now revealed that 516 and 516 A were the same unit and 560 LF Battalion now had the AKA of 516 B. On 13 June the announcement was made of the withdrawal of the US forces from the province. This caused a weak and sporadic claim by enemy propaganda that the VC had driven the Americans out of the Mekong Delta. Intelligence agencies feared a sharp increase in VC activity to support this contention; however, the surge did not develop. Instead, enemy initiated incidents decreased. Apparently the plan was to maintain a low level of activity until after the 9th Infantry Division's withdrawal.

(3) Enemy Tactics and Techniques

(a) Indirect Fire Attacks: During the reporting period the enemy remained broken down into platoon or smaller size elements in an attempt to avoid contact with US troops. He concentrated his efforts upon road interdictions, mines, booby traps, and the use of indirect fire against district towns and US/

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (R1) (U)

ARVN installations and positions. The attacks by fire came most often between 2200 and 0200, averaging four rounds per attack. All indications were that the enemy reconnoitered his firing position the night prior to the attack. The attackers were usually three in number. After the attack the weapon was immediately broken down and hidden. Firing positions were usually in populated areas to eliminate danger of being hit with countermortar.

(b) The enemy expanded his propaganda effort upon the announcement of the departure of the 9th Infantry Division. He pictured the withdrawal as being forced upon US elements rather than a step toward peace negotiation. In addition, the enemy increased attacks upon the pacification program by increased shelling of Chieu Hoi centers. In Kien Hoa Province, the enemy will concentrate on Mo Cay and Hung My Districts where the pacification has increased, but is still weak. In Dinh Tuong Province, he will probably direct his efforts against Giao Duc, Cai Be, and Cai Lay Districts; and in Go Cong Province, against Hoa Dong District, especially in the "Coconut Grove" area where he has long concentrated his activities.

(c) The enemy seemed to attempt to surface a shadow government to add legitimacy to his position. Its impact cannot be clearly defined at this time.

(4) Recapitulation of Enemy Losses:

Bunkers	2745

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (RI) (U)

(5) Intelligence Sources and Agencies

(a) Progress against the Viet Cong Infrastructure (VCI) by the CI Sections, 9th MI Det continued. VCI targets as they were developed, were passed to the Brigades or other action agencies. The CI Section passed the following number of VCI targets to the brigades during the reporting period: 1st Brigade - 20 targets, 2d Brigade - 7 targets, 3d Brigade - 12 targets. The targets were developed either by the respective PHOENIX Committees or the CI collection teams.

(b) The Division Interrogation Section processed a total of 577 detainees during the reporting period. Of this total, 126 were classified Innocent Civilians, 223 were classified Civil Defendants, 165 were classified PWs and 63 were classified Hoi Chanhs. In addition, the section processed 236 batches of captured documents, of which 141 were of tactical value. The section also processed approximately 184 pounds of captured material, consisting primarily of captured Viet Cong clothing and equipment.

(c) Significant activities and New Techniques

1 The Imagery Interpretation Section, consistent with its basic mission, accomplished the following during the reporting period. A total of 205 aerial photographic missions were received and processed, of which 22 photo interpretation reports were prepared and distributed. The results of 108 Red Haze and 36 SLAR sorties were disseminated. In response to specific requests the section prepared 18 photo mosaics, two target folders, and 12 special targeting readouts.

2 A total of 153 photographic missions were cut and packaged with field plots for dissemination to the division units.

3 During the reporting period an additional infra-red ground terminal, AN-TAQ-1A, was placed into operation, thus permitting two Red Haze sorties to be simultaneously "data linked". This direct transmittal of the imagery permitted more rapid readouts of the emissions detected and eliminated the need for the aircraft to return and off-load film at a distant airfield for interpretation. Also a SLAR ground terminal station AN/TAQ2 was installed, thus giving the capability of SLAR "Data Link".

4 Personnel detectors - XM 3 Airborne Personnel Detector (APD) and XM 2 Manpack Personnel Detector (MPD).

a During the reporting period there were 1234 personnel detector missions flown for a total flying time of 916 hours. All missions were flown utilizing the UH-1. Results of these missions were reported to the appropriate agencies

~~CONFIDENTIAL~~

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (N1) (U)

for inclusion in their compilation of intelligence reports.

b A fourth APD was received during the reporting period, consequently the MPD was completely phased out of 9th Infantry Division operations.

(6) Weather and Terrain: During the reporting period, the weather continued to have little adverse effect on either friendly or enemy operations in the TAOI. The most adverse effect on friendly operations was the result of overcast skies in the early evening thus imposing some limitation on the division's night operation.

(7) Intelligence Sources and Agencies:

(a) The enemy has the capability to:

1 Conduct multi-battalion attacks on province and district seats, other major cities, and military installations.

2 Conduct brief attacks by fire, hide his equipment, and withdraw from the area prior to employment of countermortar techniques.

3 Conduct attacks by fire and harassment on towns, villages, hamlets, outposts and other installations.

4 Conduct sniper and terrorist attacks on key bridges, roads, RD projects, and population centers.

5 Defend base areas and positions with local security forces and reinforce within a four kilometer radius.

6 Disperse major units into platoon and squad size elements.

7 Withdraw and disperse easily.

8 Wage political and psychological warfare on the populace and hold control of any area where there is no friendly security at night.

9 Surface a shadow government at most levels of political activity.

10 Position forces in forward base areas throughout the TAOI in order to support his efforts to control the populace of such areas.

(b) The enemy is vulnerable to:

1 Loss of support of the population.

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending 30 June 1969, RCS CSFOR-65 (R1) (U)

- 2 Friendly superior artillery and air power.
- 3 Interdiction of the LOCs and loss of cached supplies.
- 4 Disclosure or capture of attack plans.
- 5 Detection by friendly surveillance devices.
- 6 A breakdown in his infrastructure by aggressive allied actions.
- 7 A lack of combat effective troops and a low morale due to heavy casualties and desertions.
- 8 A loss of logistical support which has resulted in a lack of food and medicine making him vulnerable to hunger, disease, and complication of wounds.

(c) With the departure of the 9th Infantry Division from the Delta, the enemy has the following courses of action available to him:

- 1 He could strike continually and use propaganda to the effect that the US is being driven out.
- 2 He could hide, let US forces withdraw, then attack ARVN/GVN installations and personnel.
- 3 He could hide until US elements stood down with only minimal defensive capability and then attack, hoping to inflict maximum casualties upon US elements.

From all appearances it seems the enemy will allow the division to depart, while making only minimal efforts to inflict casualties by indirect fire. He will apparently direct his main effort toward countering the pacification program as it is now developing.

(8) New Techniques

(a) The 9th Infantry Division Duffel Bag Program, now in its second quarter has increased from 12 strings of 41 sensors to 25 strings of 120 sensors. The best type sensors for local use are the ACOUBUOY (Accoustical Buoy), MINISID (Miniature Hand-emplaced Seismic Intrusion Detector), MAGID (Magnetic Intrusion Detector), and GSID (Ground Seismic Intrusion Detector). Three types of emplacement have been used: Air dropping the ACOUBUOY with an attached spike from a helicopter to stick in the ground; Inserting the ACOUBUOY by boat, placing it along side of the river or canal; Hand emplacement, inserting infantry in the target area and emplacing by hand.

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (R1) (U)

(b) During the period 2793 personnel were detected with 424 target activations. Artillery fires were placed on 287 targets.

e. (C) Operations

(1) Combat Operations

(a) TOAN THANG III. The 3d Brigade continued Operation TOAN THANG III during the reporting period. The brigade operated with three maneuver battalions (2-60 Inf, 5-60 Inf, and 2(Mech)-47 Inf) in Long An Province until 2 June, when a fourth battalion, the 3-7 Inf, became OPCON to the brigade. The mission of the brigade was unchanged. On 12 May at 0500 hours an Artillery Aerial Observer was dispatched to an area southwest of Thu Thua to assist a PF outpost which was under attack. During the initial reconnaissance, the AO received heavy automatic weapons fire from an unknown size enemy force. Trp B/3-17 Cav was sent to the area and also received heavy fire. On request of the Province Chief, Recon 2(M)-47 Inf was sent to reinforce territorial forces and immediately came in contact with the enemy. A "pile-on" operation began, utilizing B, C, and D Companies of 2-60 Inf; B and D Companies of 5-60 Inf; and one company each from the 2d and 3d Battalion, 50th ARVN Regiment; 2 PF platoons, 4 RF companies; and one PRU platoon. Assault helicopters, air cavalry, tac air, and artillery supported the operation. Sporadic contact continued throughout the night. At first light, US, ARVN, and territorial forces conducted a sweep of the battlefield, while B and D/5-60 Inf conducted airmobile assaults to the northwest in pursuit of the enemy. By 2000 hours, 13 May the combined sweep and pursuit terminated. Final results of the combined operation were 91 enemy killed, six PWs, 16 crew served weapons, and 15 individual weapons captured. Combined friendly losses were four killed and 37 wounded. Three APCs and seven aircraft were damaged. On 141232H May 1969, Company B, 2-60 Inf made an airmobile assault southwest of Ben Luc (XS 6774). Gunships observed 20-30 VC with weapons evading. Elements of Companies A, D and Recon, 2-60 Inf were inserted to cordon the enemy. Sporadic contact continued throughout the afternoon and evening, with B/3-17 Cav, Artillery, and Tac Air in support. Six US were wounded during the contact, while US forces killed 39 of the enemy and captured two crew served and 17 individual weapons. At 281215H May 1969, Recon/5-60 Inf was inserted in the vicinity of the Eagle's Beak (XS 5977). At 1235 hours, Recon made contact with an unknown size VC force. Companies B and D/5-60 Inf were inserted to reinforce, while B/3-17 Cav, 240th AHC, Artillery, Tac Air, and Navy PBRs supported. Results of the operation were 21 VC (BC). Five US were killed and three were wounded. The 3d Brigade continued to support the 1969 Pacification Development Plan during the reporting period. The 3d Brigade conducted 447 ICAPs, 204 MEDCAPs, and 125 NITECAPs, treating 51,694 patients.

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (R1) (U)

(b) QUYET THANG. Operation QUYET THANG continued during the reporting period. Operation SPEEDY EXPRESS (Dry Weather phase of Op QUYET THANG) terminated 312400H May 1969. Operation RICE FARMER (Wet Weather phase) was initiated as an extension of QUYET THANG at 010001H June 1969. The 1st Brigade with four maneuver battalions (2-39 Inf, 3-39 Inf, 4-39 Inf, and 6-31 Inf) and the 2d Brigade with three maneuver battalions (3-60 Inf, 3-47 Inf, 4-47 Inf) continued operations in Dinh Tuong, Kien Hoa, Kien Phong, and Go Cong Provinces. Some of the more significant contacts that occurred during the reporting period were as follows: At 090700H May 1969, a two-day combined operation with elements of the 2-39 Inf, 4-39 Inf, and 12th ARVN Regt was initiated north of Giao Duc (WS 9943). While ARVN and 2-39 Inf forces cordoned and blocked the target, the 4-39 Inf conducted a massive sweep that ended 10 May. The results of the operation were 52 enemy killed and three captured. This operation disrupted the staging area for the 261A VC Battalion. At 120915H May 1969, D/3-39 Inf made contact with an estimated enemy company in the Cam Son Area (XS 1945), sustaining four US KIA and eight US WIA. A brief but intense fire fight resulted in 16 enemy killed. Three ChiCom pistols and many documents were captured. A combined operation, with elements of the 2-39 Inf, 3-39 Inf, and the 12th ARVN Regiment, was initiated 200645H May 1969 in the Cam Son area (XS 1545). After an artillery preparation and Tac Air strike, troops were lifted into zones (2-39 Inf on the north, 3-39 Inf in the center, and 12th ARVN Regt to the south) sweeping east toward the Ba Rai River. Results of the operation were 21 enemy killed. Friendly losses were two killed and 18 wounded. At 211930H May 1969 Company C, 4-47 Inf engaged a company size enemy force northeast of Ben Tre. The enemy returned fire with small arms and automatic weapons. A "Sting Ray" light fire team from the 9th Aviation Battalion and the 3-34 Artillery supported resulting in 21 enemy killed and 12 secondary explosions. Three US soldiers were wounded. On 21 May, A, B, and C/4-39 Inf, moved from night locations into a U-shaped blocking force north of Giao Duc, (WS 9844). In the early morning of 22 May, Company D, was inserted to complete the encirclement of the enemy position. A classic "hammer and anvil" operation ensued. Supported by C Btry, 1-11 Arty and B Trp, 3-17 Cav, the operation, which was conducted by a single infantry battalion, resulted in 117 enemy killed and four US wounded. At 241500H May 1969 Company A, 4-47 Infantry conducted footmobile RIF operations in reaction to a "People Sniffer" reading SW of Thoi Son Island (XS 4137). Company A received small arms, automatic weapons, and M79 fire from an unknown size enemy force. "Crusader" gunships from D/3-5 Cav supported. As the contact continued C/4-47 Inf was inserted as a blocking force. Contact broke at about 2400 hours. A sweep of the contact area revealed 102 enemy dead. US casualties were eight wounded. At 231200H June 1969, A/3-47 Inf conducted a watermobile insertion west of Tiger II (XS 6827) with one platoon of National Police and a Hoi Chanh, who led the allies to a cache containing the following: 17 ChiCom Rifles, 11 submachineguns, seven Soviet light machineguns, one German heavy machinegun, one Thompson submachinegun, one M16,

~~CONFIDENTIAL~~

15 July 1969

AVDE-MH

SUBJECT: Operational Report of 9th Infantry Division for Period Ending 30 June 1969, RCS CSFOR-65 (RI) (U)

one AK 47, two BARs, and a large amount of mortar and small arms ammunition. Throughout the reporting period, the 6-31 Inf had the difficult DARMA (Defense Against Rocket and Mortar Attack) mission for Dong Tam Base. That there was a decrease in the number of attacks by fire against Dong Tam during the two-month period is a tribute to the aggressive spirit of the 6-31 Inf. The 1st Brigade supported the 1969 Pacification Development Plan during the reporting period with 555 ICAPs, 700 MEDCAPs, and 76 NITECAPs, treating 82,625 patients.

(2) Assessment

(a) 1st Brigade. During the reporting period, the 1st Brigade killed 1855 enemy and captured 103 PWs. This impressive record, which was achieved through a large number of small unit contacts, contributed significantly to the pacification effort in Dinh Tuong Province. Enemy-initiated incidents were primarily attacks by indirect fire against Dong Tam Base, battalion fire support bases, and ARVN/RF/PF outposts. An increase in combined operations, with tactical integration of allied troops down to company level, provided a valuable training vehicle for ARVN and Territorial Forces. At the end of the period, the 1st Brigade began planning for a phased redeployment to Hawaii.

(b) 2d Brigade. The 2d Brigade killed 1566 enemy during the period, and captured 68 PWs. The number of enemy-initiated incidents varied. From mid-May until the end of the month enemy-initiated incidents increased, with the apparent VC objective of increasing his domination of those areas under his control. During the month of June, his activities consisted predominantly of terrorist incidents, indirect fire attacks, and harassment of GVN outposts. Throughout the period, the 2d Brigade concentrated on the support of the pacification efforts in Kien Hoa Province. The Brigade's ability to react quickly and reinforce any element within the TAOI was a major factor that prevented the VC from mounting a successful offensive. The 2d Brigade began redeployment activities during June. The 3-60 Inf, and the 3-47 Inf had ceased offensive operations by the end of the reporting period. Close coordination was made by the 7th Infantry Division (ARVN) and territorial forces to insure that the momentum developed by the 2d Brigade in Kien Hoa Province would be maintained by GVN forces after the 2d Brigade's redeployment.

(c) 3d Brigade. During the period the 3d Brigade killed 1039 enemy and captured 74 PWs, as the level of enemy activity increased in its TAOI. Indications are that the enemy will continue to remain fragmented and will continue to conduct economy of force operations and attacks by fire against allied military installations. The 3d Brigade will remain in Long An Province after the redeployment of the 1st and 2d Brigades.

(d) A summary of division and maneuver battalion combat statistics for May and June is attached at Inclosure 7.

~~CONFIDENTIAL~~

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (R1) (U)

(3) Combat Support Activities

(a) Artillery Support

1 Division Artillery firing elements continued to support division operations in Dinh Tuong, Kien Hoa, Long An, Kien Phong, Kien Tuong, Vinh Binh, and Gia Dinh Provinces. Fire support was also provided for Army Republic of Vietnam units, Regional Forces, and Civilian Irregular Defense Groups. The 2d Battalion, 4th Artillery supported one of the few pitched battles fought by division forces during the period, the Thu Thua engagement of 12-13 May 1969, in which three batteries fired over 1000 rounds into a tight encirclement of two infantry battalions plus sector forces. On 14 May, the battalion began a program of direct fire with self-propelled 155mm howitzers into treeline fortifications, in support of Regional Forces/Popular Forces. Operations of 1st Battalion, 11th Artillery were highlighted by frequent airmobile displacements and split battery operations. All 1st Brigade operations were closely supported by artillery, despite commitment over a four province area. On one operation, near the Cambodian border, in the northern Plain of Reeds, the battalion put airmobile platforms to effective use. Over 200 enemy dead were credited to the 1-11th Artillery during the two month period. The 3d Battalion, 34th Artillery sent its batteries frequently out of the normal TAOI, the floating barge artillery traveling several times to Vinh Binh Province and once into the South China Sea to support operations in the treacherous mangrove swamps of the Binh Dai Secret Zone. To obtain necessary coverage, it was necessary to split batteries frequently. On 29 June, the first of the battalion's batteries was withdrawn from action, preparatory to redeployment to CONUS and inactivation. The 1st Battalion, 84th Artillery made 20 battery displacements by land and air during the period, on several occasions overcame enemy ambushes and minings. The battalion's self-propelled 155mm howitzers performed creditably in the hazardous but highly successful direct fire assaults on enemy-held tree-lines.

2 Artillery with the 9th Infantry Division fired a total of 96,146 rounds of 105mm howitzer, 44,583 rounds of 155mm howitzer, 7023 rounds of 8 inch howitzer, and 1744 rounds of 175mm gun.

3 A statistical summary of artillery support is attached as Inclosure 5.

(b) Helicopter Gunship Support

1 The 9th Aviation Battalion flew 3728 gunship sorties. Missions included escort for: VIP flights; aerial displacement of supplies, personnel and equipment by cargo helicopters; medical evacuation; people sniffer; convoys; insertions and extractions; and firefly missions. The gunships provided support for units in contact and DARMA missions at Tan An and Dong Tam. The gun-

AVDE-101

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (R1) (U)

ships accounted for 159 VC KBA(BC). They destroyed 141 structures and 75 sampans. Gunships damaged 18 structures and 36 sampans.

2 Troop D, 3-5 Cavalry supported all division elements during this period, providing an average of seven armed helicopters daily. Missions included reconnaissance, screening and blocking operations. The troop accounted for 238 VC KBA and 354 sampans destroyed.

(c) Tactical Air Support: The number of air sorties increased slightly during this period. A chart reflecting ordnance expended and results obtained is attached as Inclosure 6.

(d) Strategic Air Support: There were no B 52 strikes conducted in support of the 9th Infantry Division during the reporting period.

(e) Naval Fire Support: Naval gunfire was effectively integrated with artillery fire in support of 2d Brigade operations. Naval fire was also employed extensively in support of sensor activities.

(f) Air Cushion Vehicle Support: During the reporting period the Air Cushion Vehicle (ACV) unit with attached infantry and army aviation elements of the 2d and 3d Brigades conducted reconnaissance, security, and raid missions in Long An and Go Cong Provinces. Two ACVs were operational during the period. Twenty to 24 infantry were carried as part of the cavalry team on all operations. The advent of the wet monsoon season considerably increased trafficability for ACV operations, particularly in the Plain of Reeds. Results during the period were 71 VC/NVA killed, 18 PWs, 17 weapons, and 75 lb of documents captured.

f. (c) Training

(1) During the reporting period the following training was conducted within the 9th Infantry Division:

- (a) Replacement Training
- (b) Officer/NCO Replacement Training
- (c) NCO Leadership Training
- (d) Battalion Refresher Training
- (e) Sniper School Training

(2) Due to implementation of plans for redeployment of the 1st and 2d Brigades, all training conducted by Reliable Academy was concluded during the month

15 July 1969

SUBJECT: Operational Report for 9th Infantry Division for Period Ending  
30 June 1969, RCS CSPOR-65 (R1) (U)

of June 1969. Current plans are to establish a Replacement Training Center, as organized for a separate light infantry brigade, within the 3d Brigade.

(3) Replacement training, which consisted of five days of intensive orientation and physical training, was received by 107 officers and 2818 enlisted men at Reliable Academy during the reporting period. In addition, several officers assigned as advisors to IV Corps Delta Military Assistance Command received replacement training under a modified training program. Replacement training at Reliable Academy ended on 20 June.

(4) The fourteen day NCO Leadership Course continued to produce highly motivated and efficient small unit leaders. During May and June 156 men completed the course. The final leadership course was completed on 30 June.

(5) The 9th Infantry Division Sniper School graduated four classes during the reporting period. The final class, before movement of the school to the 25th Infantry Division was completed on 19 July. The Sniper School also conducted training in the use of starlight scopes for ARVN Cadre from the 9th and 21st Infantry Divisions (ARVN).

g. Logistics: The logistical mission of providing planning, guidance and support for all organic, and attached units and units under the operational control of the 9th Infantry Division, and preparing for redeployment and inactivation was accomplished during the reporting period. Major tactical units supported were two land based brigades and one riverine brigade organic to the 9th Infantry Division. Support was provided to division units operating in Long An, Go Cong, and Dinh Tuong Provinces.

(1) Supply

(a) The flow of goods and services continued to improve during the initial portion of the reporting period. In the latter portion the shifting of priorities and transferring of properties from redeploying or inactivating units alleviated shortages in many areas.

(b) Preparing units for redeployment or inactivation required close coordination to insure proper disposition of items on the commander's critical items list, TOE items for inactivating elements and post, camp, and station property. Priorities were established to enable these items to reach the user with the most significant need.

(c) A complete inventory of all items on hand in each unit was performed to facilitate transfer or turn-in of equipment.

(d) The 3d Battalion, 60th Infantry was inactivated and their property books brought to zero balance on 29 June 1969. This unit provided an experience

~~CONFIDENTIAL~~

15 July 1969

AVDE-MH

SUBJECT: Operational Report of 9th Infantry Division for Period Ending 30 June 1969, RCS CSFOR-65 (R1) (U)

factor and set the pattern for the remainder of the inactivating units.

(a) There has been noticeable improvement in the availability of building materials for fire bases beyond the basic need of bunkers and other essential defensive positions. Small size lumber continues in critically short supply.

(2) Services: Improvement in availability of goods continued during the reporting period. A shortage of luggage for troops deploying was noticed in the last half of June. Requisitions were submitted and when filled should alleviate this situation.

(3) Support

(a) G4 Staff visits and classes on generator maintenance and vehicle maintenance (to include TAERS and PLL) have significantly lowered the deadline percentage for these critical items throughout the division.

(b) Command Material Maintenance Inspections reflected an increase of command interest and organizational level planning in all areas of equipment maintenance.

(4) Transportation

(a) The trailer-on-ship concept of moving heavy timber for certain fire support base construction was initiated during the reporting period. A low bed trailer is loaded on an LCM-8 at Dong Tam and met at My Thuan by a tractor which hauls the lumber to FSPB Danger.

(b) Control of transportation of local national employees to and from My Tho was put in effect. Twenty-three trucks are used to bring the 550 employees with transportation permits to Dong Tam.

(c) Arrangements were made with 1st Log Command to provide shipment of unaccompanied hold baggage for redeploying personnel. The personnel property branch was moved to an area with a capability of processing 165 people per day and reserve capability of 400 with a three day notice.

h. (C) Psychological Operations and Civil Affairs

(1) Psychological Operations

(a) The Accelerated Chieu Hoi Program, beginning 15 June, and PSYOP activities generated by the redeployment of the 9th Infantry Division constituted the two largest PSYOP programs during the reporting period. Other PSYOP activities were carried out as usual. Fifty per cent of all PSYOP air and 71%

~~CONFIDENTIAL~~

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (R1) (U)

of all ground missions carried out during the reporting period were conducted within APC area boundaries. Most of these missions were targeted against specific units selected for the accelerated Chieu Hoi campaign as being most susceptible to mass rally. PSYOP media were used to publicize RVNAF achievements and stress the fact that they are now capable of bearing the tactical responsibility of the Delta.

(b) The themes used during the period varied according to the specific programs and targets, but fell generally within these categories: Chieu Hoi, Special Rewards Campaign (Third Party Inducement), GVN Image, ARVN Image, and VIP. The Special Rewards Campaign, created to bolster the effectiveness of the Accelerated Chieu Hoi Campaign, generated a large number of the Hoi Chanh who rallied throughout the Division TAOI.

(c) Objectives of PSYOP:

1 To build the GVN image and create within the populace a greater respect for the capabilities of the RVNAF.

2 To encourage enemy soldiers to rally, not only as individuals, but as units.

3 To convince the civilian populace, as well as the VC, that the American troops leaving the Delta have done their job and can now return to their homes, confident that the RVNAF is capable of defeating the enemy.

4 Convince the enemy soldier that he has lost and that Chieu Hoi is the only alternative.

(d) Throughout the reporting period, every effort was made to maximize the coordination of PSYOP efforts. The Accelerated Chieu Hoi Campaign was the greatest contributing factor to this. Before and during Chieu Hoi Month, frequent meetings were held including representatives from G5, the brigade S5s, VIP, the Chieu Hoi Ministry, Province PSYOP, and 7th ARVN Division. These meetings succeeded in minimizing duplication of effort and allowing maximum utilization of personnel and assets.

(e) During the reporting period, the total of confirmed Hoi Chanh was 1600 for the Division TAOI. Of this total, 92 rallied to divisional units. The continual tactical pressure, accompanied by a good sales program in regard to Chieu Hoi Campaigns, continued to account for extremely high returnee rates. The Accelerated Chieu Hoi Campaign served to keep the 9th Infantry Division's rallier rate at a high level even though the division's redeployment had been announced.

15 July 1969

AVDE-MH

30 June 1969, RCS CSFOR-65

(f) PSYOP Activity Statistics (1 May - 30 June 1969)

1 Leaflet Missions (total): 7343

Air: 3563

Ground: 3780

2 Loudspeaker Missions (total): 3896

Air: 1029

Ground: 2867

3 Loudspeaker Hours (total): 2110.5

4 Rapid Reaction Leaflets produced by 9th Inf Div: 10

5 Rapid Reaction Leaflets produced by other agencies: 3

(2) Civil Affairs/Civic Action

(a) The 3d Brigade's Special Action Forces in Long An Province, consisting of one US MAT Team supported by one US rifle squad and working closely with RF/PF and RDC, continue with noted success in various areas. ICAPs and NITECAPs were added to their schedule in the first half of the reporting period. Three ambushes were initiated during NITECAPs and, although US troops conducted a sweep of the contact area, the RF/PF platoon took the initiative and led the sweep. The SAF elements are conducting their normal activities of ICAP, MEDCAP, and NITECAP with the GVN S5 and medical representatives. Priority remains on the contested hamlets targeted under the GVN 1969 Pacification Plan. Each SAF continues to find incidents where GVN forces are not staying in the hamlet areas as directed by their respective district chiefs. Such incidents are reported and necessary steps are taken to correct this deficiency. In the latter part of the reporting period, two ambushes conducted by SAF elements resulted in VC body count and weapons captured. Continued emphasis is being placed on training of Territorial Forces by use of combined night ambushes.

(b) Repair and construction projects continued to increase in both quantity and quality during the reporting period. A new determination has been noted in the Vietnamese people, which coupled with a stronger confidence and faith in GVN and US forces, has led to the successful completion of many projects which in the past would not have been started.

1 The 12th and 13th of May marked a good example of the strengthened

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (HL) (U)

Vietnamese determination. On these dates approximately 200 enemy troops, mostly NVA, moved into Bo Kinh Hamlet with the mission of attacking the district town of Thu Thua. In the ensuing battle, three US battalions and Thu Thua RF/PF forces met and defeated the NVA force. The victory, however, was costly because the NVA used the town as a battle site. In the final analysis, 366 homes had been completely destroyed by a combination of artillery fire, ground fighting and the NVA burning many houses as they retreated. Two thousand five hundred refugees needed homes and plans were immediately put into effect to restore the town. Among emergency relief items supplied by the 9th Infantry Division were 100 55-gallon water drums, 700 5-gallon water cans, 100,000 board feet of 2" by 4" lumber and 376 sheets of roofing tin. This, together with the determination of the people, has restored Thu Thua to the large and prosperous town it was. This is an example of the great strides that Vietnamese/US cooperation has taken in Long An Province the past few years. It is to be noted that the residents of Thu Thua blame the VC/NVA, not the US and GVN forces for this incident.

2 Three years ago the province officials of Dinh Tuong Province approved funding for the Cai Be Hospital, but numerous other projects have received priority while the hospital was postponed. Only two hospitals, one in My Tho and one in Cai Be, serve the 600,000 people of the Province. Barely adequate dispensaries, providing little more than first aid, dot the remainder of the province. The My Tho Hospital affords reasonably good medical coverage for the eastern part of the province, but the facility at Cai Be is considerably inferior. The hospital's physical plant is in deplorable condition. The building is an old schoolhouse, pitifully overcrowded and lacking even the flexibility to separate the maternity and contagious disease wards. A special grant of 1,000,000 \$VN has been made available to the 1st Brigade to purchase the needed materials on the local market because of nonavailability through normal supply channels. Besides materials and supervision, the 1st Brigade, until redeployment, is supplementing the medical staff with brigade personnel. The project has received top priority from the 9th Infantry Division and completion of the Cai Be Hospital renovation is anticipated before the 9th Infantry Division Headquarters redeploys.

(c) Distribution of commodities, both through construction projects and assistance to social welfare, continues to be an important and effective part of the division's program.

1 Building materials

Cement: 265,000 lb

Tin Sheets: 4561

Lumber: 324,211 bd ft

Paint: 50 gal

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (R1) (U)

- Other: 461,167 lb (includes fill, sand, gravel, culverts)
- 2 Kits: 3835 (includes health kits, school kits and miscellaneous)
  - 3 Food: 24,455 lb
  - 4 Clothing: 542 lb
  - 5 Health items: 2838 lb ( includes soap, toothpaste, etc)

(d) Medical Civic Action Program: During this period, although shorter than usual, the number of MEDCAPs and patients treated came very close to meeting the last report's figures. The CAPs, continuing with approval from the Province Chiefs, Health Chiefs, and Senior Advisors of all the provinces concerned, have produced greater cooperation between the 9th Infantry Division and the 7th Infantry Division (ARVN). Operations were targeted so that they would better support the GVN 1969 Pacification Plan.

1 A meeting was held between the 7th Infantry Division (ARVN) and the 9th Infantry Division to discuss and coordinate the Vietnamese assumption of the US MEDCAP schedule and CA construction projects. Although the 9th Infantry Division planned to complete or turn over to CA platoons all construction projects, this was impossible to do with the MEDCAP program. The 7th ARVN Division, having fewer trained personnel, could not assume the complete US schedule but worked out an ambitious program within the framework of their capabilities to provide as much medical assistance as possible to the civilian population in their area of operations.

2 Since 3 May, the 15th Engineer Battalion has been utilizing a "Mobile MEDCAP" program. Having converted an M 109 "shop van" into a mobile aid station, the 15th Engineer Battalion has provided their battalion surgeon with not only the facilities but also the privacy he needs. The Mobile Team, consisting of the battalion surgeon and three or four medics, has visited Kien Hoa, Dinh Tuong, and Long An Provinces at least twice in its eight operations to date. The van has made appearances in Truc Giang, Ben Tranh, Binh Phuoc, and Cho Gao Districts. During only eight "Mobile CAPs", the team has treated in excess of 800 patients and received numerous intelligence reports. As a sidelight the 15th Engineer Battalion has distributed an average of 100 pounds of food per operation. "Mobile CAPs" are usually planned through the District Senior Advisor and an RF/PF squad or platoon is provided for security.

3 Dental Civic Action has continued with noted success. Over a thousand "toothaches" have been eased during the reporting period. The 9th Medical Battalion carried the bulk of this responsibility, having treated over 600 patients in DENTCAPs. The need remains greater than the qualified personnel available,

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (R1) (U)

but more and more of the demand is being met.

(e) ICAP/NITECAP. SP4 Jack Vaughn, the noted 9th Infantry Division magician, or "Goldfinger" as he is called, has continued to thrill Vietnamese audiences. With the large increase in ICAPs and NITECAPs, SP4 Vaughn added these to his schedule. Having gone on 25 ICAPs and NITECAPs, he has thrilled over 20,000 applauding Vietnamese. His travels have taken him to all four provinces in the 9th Infantry Division area and in Long An Province, he has performed in each of the seven districts. His efforts have been rewarded many times with needed intelligence reports on local guerrillas.

(f) Transportation

1 Lines of communication received special attention during the reporting period in view of the upcoming wet season. There were 57.6 Kms of roads repaired and six kilometers of roads constructed. Seventeen bridges were constructed and four were repaired.

2 The An Luc Long Village Chief was threatened with death by the local VC if he cooperated with the US, and was given an example by the VC killing five Vietnamese who worked for the 2(M)-47 Inf. In spite of this he went to the S5 of the 2(M)-47 Inf and requested help in the building of a foot bridge for an old man who could not construct it himself because of his tubercular condition. The bridge was completed and the obvious defiance against the VC showed the trust that the Vietnamese have acquired in the GVN and US forces.

(g) Community Relations. Community relations projects were more numerous during the reporting period than at any other period covered. The 7th Infantry Division (ARVN) and the 9th Infantry Division Special Services combined to present a series of entertaining events for the 9th Infantry Division GIs at the Ponderosa Service Club. Athletic events included a ping-pong tournament, which the 7th Infantry Division (ARVN) won, and a Tai Kwon Do exhibition (Korean judo and karate). Shows included a cultural drama team from the 7th Infantry Division (ARVN) PSYWAR Section and a special picnic show for orphans and underprivileged children of the My Tho area. The shows and events provided a welcome break for the GIs, and the 7th Infantry Division (ARVN) requested to come back again, showing that they enjoyed the activities as much as the 9th Infantry Division did.

1 The English classes in My Tho drew to a close at the end of the reporting period. Three Hundred students of the My Tho Girls' High School and the Boys' High School received certificates of achievement and awards for top graduates upon completion of the 24 hour course. Another 50 students at the coed high school who got a late start are now nearing completion of their course.

2 The 9th Medical Battalion graduated eight students during the reporting

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (R1) (U)

period in two four-week courses designed to train the Vietnamese students in advanced first aid. Four of the eight students have gone on to province hospitals to continue their training and to apply their knowledge. The 9th Medical Battalion has aided in partially filling the tremendous need for qualified medical help in the Delta area.

3 The 9th Infantry Division became the first division to receive the Unit Civil Actions Honor Medal, during ceremonies at Dong Tam on 5 July 1969. GEN Cao Van Vien, Chief, Joint General Staff, made the presentation of the Vietnamese Cross of Gallantry with Palm as well as the Civil Actions Honor Medal, 1st Class, with Oak Leaf to MG Harris W. Hollis, 9th Inf Div CG. The Civil Actions Honor Medal was presented for significant accomplishments in civil action since the division arrived in Vietnam (19 Dec 66 to 28 Jun 69).

1. (C) Business Support: During the reporting period a gradual transition between the dry weather program and wet weather program was started. Intermittent showers, which marked the approach of the monsoon season, flooded the fields and made horizontal work difficult. Operations during the period were broken down as follows:

(1) Dry Weather Program

(a) During the first part of the period most engineer effort was placed on completing the dry weather program projects. It was extremely important to complete work at fire support bases and Phase III road work so that they would be usable during the wet season.

(b) During the reporting period work was completed on the upgrade of three existing fire support bases and construction of three new fire support bases.

(c) Phase I work (opening of road to class 12 military traffic and light civilian traffic) was completed on 39 Kms of road for a total of 104 Kms out of 105 Kms of the program being completed. The remaining one kilometer of road is expected to be finished by 31 July. Phase III work (upgrade of roads to all weather capability) was started and approximately 10 Kms were completed.

(d) Approximately 416 acres of land were cleared during this period. This is a total of 786 out of 1950 acres. The shortage of dozers and Rome Plows continued to delay the land clearing until the entire project was finally halted due to the weather.

(2) Wet Weather Program

(a) Planning for the wet weather program was completed. Primary emphasis was placed on the maintenance of MSRs; replacement of tactical bridging,

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RGS CSFOR-65 (RI) (U)

and construction of new bridges.

(b) With the start of the rains the wet season program was implemented. The importance of the dry weather program was quickly realized when heavy rains fell and flooded the paddies making any further horizontal work difficult.

(3) Combat Support: Combat engineer support was provided by both the 15th and 86th Engineer Battalions to tactical units in the Division TAOI. Support consisted of demolition and booby trap clearing missions, numerous mine sweeps, and road clearing operations. Repair of critical bridges and construction and maintenance of protective systems (pier protection, mine booms, lighting) on QL 4.

(4) Other Engineer Support: Technical assistance and materials were provided to the 7th Infantry Division (ARVN) for bridge repairs. Classes in demolition and booby trap destruction were given to RF/PF units in Long An and Kien Hoa Provinces. Company D, 15th Engineers constructed a rifle range berm for RF/PFs in Kien Hoa and a water tower for the Hoi Chanh Center in Ben Tre.

j. (C) Signal Support

(1) During the reporting period the areas served by the Division Communications System were as follows: Ben Luc, Bach Kien, Tan An, Binh Phuoc, Tan Tru, Can Giuoc, Dong Tam, Ben Tre, FSPB Moore, FSPB Tiger II, FSPB Danger, FSPB Schroeder, and the floating portion of the Mobile Riverine Brigade.

(2) Signal support to the division during May and June was concentrated primarily on maintaining efficient and reliable communications, and improving existing facilities. Notification of redeployment in mid-June and subsequent preparations for unit movements, substantially reduced requirements for extensive planning and support of major operations. Significant items during May included the return of the USS Benawah and re-establishment of its VHF link to the division system and the installation of antenna towers at Rach Kien and FSPB Danger. On 18 May 1969, the MARS station commenced operation from its new building designed to provide improved service to members of the division. On 1 June, an infantry battalion of the 199th LIB was attached to the division and based at Can Giuoc. VHF support was provided permitting access to the division system through Tan An. During the period 2-12 June, 1st Brigade operations in the Moc Hoa area were supported by air lifting a VHF terminal to Moc Hoa and VHF relay equipment to Tuyen Nhon. In addition, an FM retrans station was installed at Tuyen Nhon. Early June also saw the first operational test of an experimental communication console for the LOH (Light Observation Helicopter), utilizing AN/PRC-77 radios. The installation was designed and built by the 9th Signal Battalion to provide command and control communications for battalion commanders, using LOH as a C/C ship. Communication equipment organic

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (R1) (U)

to the aircraft proved inadequate for this purpose. Of note is the fact that, while being demonstrated to the Division Commander, the console was used to commit combat troops. Needless to say, the demonstration was successful.

(3) During this reporting period two new types of antennas were tested for possible use within the division. Experiments were conducted to investigate the theory that a double antenna, oriented "exactly" North and South, would exhibit omni-directional characteristics. Results were encouraging, but inconclusive, and further testing was interrupted by redeployment. Tests were also conducted with the Mark III field expedient antenna for use with portable FM equipment. Performance was excellent and compared favorably with the RC 292 ground plane. The principal drawback of the antenna, which uses a doublet configuration, is the lack of trees or other supports for installation in the flat terrain of the Delta. Use in fixed facilities has proved very successful.

(4) Phase out of division communications, pursuant to redeployment, required extensive coordination and detailed planning. The necessity to maintain adequate and responsive communications while releasing assets for shipment or turn-in, was accomplished with minimum confusion and no loss of essential command and control.

#### k. (c) Army Aviation

(1) The 9th Infantry Division, in supporting two Corps Tactical Areas, obtains its aviation assets from both II FFORCEV and IV Corps Tactical Zone (CTZ). During the past quarter the 9th Infantry Division has been supported by the 214th Combat Aviation Battalion (CAB) with two Assault Helicopter Companies (AHC) per day in direct support of the 1st and 2d Brigades operating in Kien Hoa and Dinh Tuong Provinces. The 3d Brigade has been supported by II FFORCEV with an AHC on a mission basis operating in Long An Province.

(2) The division lift requirement has been supported by IV CTZ with the 147th Assault Support Helicopter Company (ASHC). Daily requirements involve three CH-47s flying an average of 18 hours and 36 sorties per day. Heavy lift requirements for the 3d Brigade have been supported by II FFORCEV with a CH-47 flying an average of 4.5 hours and nine sorties per day.

(3) The division CH-54 requirements are supplied by II FFORCEV. Division requirements for CH-54 arise two or three times a week for an average of three sorties per day and two hours blade time. A recapitulation of heavy lift support shows that 10,789 tons of cargo and 21,605 passengers were lifted for a total of 2,091.7 flying hours in support of the division.

(4) Cavalry troop support for the division consists of D/3-5 cavalry which is organic to the division and B/3-17 Cavalry which is in direct support. Additional cavalry troops are supplied to the division by both II FFORCEV and IV CTZ

CONFIDENTIAL

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFGR-65 (RI) (U)

on a mission basis as required.

1. (C) Chemical Operations

(1) Personnel detectors (People Sniffer) - XM3 Airborne Personnel Detector (APD) and XM2 Manpack Personnel Detector (MPD).

(a) During the reporting period there were 1234 missions flown for a total flying time of 915.07 hours. All missions were flown utilizing the UH-1. Results of these missions were reported to G2 and to brigade and/or air cavalry units for inclusion in their compilation of intelligence reports. With the arrival of the fourth APD, the MPD has been completely phased out of 9th Infantry Division operations.

(b) During the reporting period sniffing results have shown considerable improvement. This is due largely to the improved synoptic weather conditions; high winds have subsided and ideal sniffing conditions often occur during the inversion condition which follows rains.

(2) Riot Control Agent Operations

(a) During the reporting period there were no missions flown utilizing bulk CS due to the lack of suitable targets.

(b) There were 22 E-158 Tactical CS Clusters expended during the reporting period. These were used by the 3d Brigade on point type targets developed from sniffer readings.

(3) Defoliation

(a) During the two-month period of this report one defoliation request was forwarded through channels. Long An Province has been the most active in providing potential targets. All base camp areas have been adequately sprayed and all approved projects in this area have been completed.

(b) In May and June seven ground spray targets were completed expending 2765 gallons of water soluble agents representing a coverage of 137.5 hectares. Helispray operations totaled 2170 gallons of herbicide dispersed covering an area of 287 hectares. Total coverage for air and ground operations were 424.5 hectares coverage with 4935 gallons expended.

(c) Allocation of aircraft for herbicide operations was given a relatively low priority during most of the reporting period. Short blade time allotments combined with the time required for preparation of the first mission of each day, have caused a low rate of gallons sprayed per blade time allocated.

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (R1) (U)

(4) Flame Expedients

(a) A flame expedient known as the "Flame Bath" has been employed and improved during the reporting period. The expedient air-dropped from a UH-1H aircraft at an altitude of 1500 ft, is assembled from 55 gallons of Diesel Fuel, 55 gallons of pinaprins, and 55 gallons of JP4. The three barrels are stacked on their sides in a triangular configuration, and held together with two 20 foot cargo straps. Ignition is obtained by wiring two M49A1 surface flares to the cargo straps and rigging them for pin pull ignition initiated by lanyard pull upon release of the cargo by the pilot.

(b) Results from using this weapon have been excellent. Infantry units favor its usage on booby trapped areas, and have reported burned off areas as large as 100 meters in diameter resulting from the drop of a single munition.

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (RI) (U)

2. (C) Section 2, Lessons Learned: Commanders' Observations, Evaluations,  
and Recommendations

a. (C) Personnel

(1) (U) Skin Disease

OBSERVATION: That the rainy season has increased the non-effectiveness rate resulting from skin disease in the Delta.

EVALUATION: The command policy of limiting combat operations to 48 hours remained the only effective control measure in reducing total skin disease. During the rainy season the entire body of combat foot troops is continuously wet and both bacterial infections and inflammatory fungal infections show significant increases at the onset of this season. The rainy season has shown us that the troop incapacitation level is in direct ratio to environmental inundation.

RECOMMENDATION: That the command policy of limiting operations in "paddy areas" to 48 hours followed by a 24 hour "drying out" period is the most important method of treatment of disease of the feet and body skin conditions. This policy should be continued throughout the rainy season.

(2) (U) Offense Rates

OBSERVATION: Division offense rates remained below the USARV average in all categories. However, periods of selective enforcement can quickly change this favorable posture in any of the offense categories on a weekly basis.

EVALUATION: Continuing command emphasis, intensive troop education, and proper command action are required to maintain a low offense rate. Without these, selective enforcement serves to raise and lower the offense rate while producing little in the way of tangible results.

RECOMMENDATION: A coordinated effort involving all aspects of the command is required to effectively reduce offense rates. In addition to the enforcement effort, which should be consistent rather than sporadic, assistance in the maintenance of law and order should be sought from all General and Special Staff Sections as well as unit commanders. Formation of a type of disciplinary control council would be beneficial in this respect.

(3) (C) Detainee Processing: Expedite disposition of detainees.

OBSERVATION: Disposition of detainees is often unnecessarily prolonged because of administrative delay in processing required paperwork.

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (R1) (U)

EVALUATION: Certain administrative steps are required by regulations before proper disposition can be made of a PW/detainee. Routine handling and normal distribution channels are not rapid enough to satisfy the time limits established by USARV and local provinces. This is especially true in the case of Civil Defendants, i.e., Long An Province will not accept a Civil Defendant that has been held in excess of 48 hours.

RECOMMENDATION: That negotiations be conducted with Long An Province to extend their limit of 48 hours to something more realistic. Additionally, that a standard operating procedure be established, designating internal routing of detainees and establishing priorities in order to preclude administrative delays.

(4) (C) Hospital Detainee Ward

OBSERVATION: The lack of a special prisoner ward in the 3d Surgical Hospital creates serious custodial and security problems and requires the use of excessive military police personnel resources.

EVALUATION: Detainees being treated at medical facilities or evacuated through medical channels, presently share the same facilities as US personnel. They are frequently located in several different wards, intermingled with US personnel. This frequently requires the use of several guards when one or two would suffice.

RECOMMENDATION: That a prison ward or isolation area be established to house all PW/Detainees for ease of handling and security.

(5) (U) Replacement Personnel

OBSERVATION: Replacement personnel, especially in medical MOSs do not possess the requisite qualifications.

EVALUATION: Experience has demonstrated that individuals with medical MOSs are being assigned with grade and MOS not commensurate with appropriate skill level. In an attempt to satisfy present and future needs, a comprehensive training program has been initiated with the assistance of Headquarters and Company A clearing station and the 3d Surgical Hospital.

RECOMMENDATION: That this type of training program be continued.

(6) (C) Redeployment

OBSERVATION: During this reporting period, two of the division's brigades and the division base were given orders to redeploy to CONUS and Hawaii. The

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RGS CSFOR-65 (R1) (U)

remaining brigade was given orders to remain in the Republic of Vietnam for further service and redesignation similar to a light infantry brigade.

EVALUATION: The accomplishment of the announced redeployment was seriously hampered by a lack of information concerning criteria for personnel deploying or remaining in country. Effective planning was therefore hampered as hand receipt holders, advance parties, and various teams associated with the move could not be determined accurately. The most serious problem concerned the requirements to load equipment for shipment, without knowing what personnel were to redeploy with the unit. This makes it very difficult to retain supply accountability and have the equipment loaded into the CONEXes in time for redeployment. Also the many unsolved individual inquiries concerning redeployment status caused a marked decrease in the morale of all personnel, except those who received curtailments for subsequent reassignment to units moving to CONUS.

RECOMMENDATION: That future troop withdrawals be planned well in advance, and more timely decisions made as to composition of deploying units, so that personnel turbulence may be minimized, and redeployment planning may proceed in an orderly manner.

(7) (C) Personnel and Administration

OBSERVATION: Minor casualties, not requiring medical evacuation, are oftentimes not reported expeditiously to higher headquarters.

EVALUATION: Minor casualties, those sustained in combat and not requiring treatment in the field, or requiring only minor field treatment, are often not reported to higher headquarters until after the unit returns from its operations, and are then reported by unit medical facilities only as a basis for Purple Heart qualification. Late reports are submitted to brigade and division headquarters from two to five days after the incident.

RECOMMENDATION: To insure that casualty figures of all units, to include company, battalion, brigade, and division, are the same, commanders at lowest levels should report all casualties to higher headquarters, as soon as possible, no matter how slight the wound.

b. (C) Operations

(1) (C) Decreased Levels of Tactical Operations

OBSERVATION: As 2d Brigade units stood down in preparation for redeployment, the Brigade TAOI was covered adequately with available forces by using platoon size airmobile insertions to locate and establish contact with the enemy.

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (R1) (U)

EVALUATION: A given area could be covered with decreasing troop assets by using fully the assault lift provided by the 162d Assault Helicopter Company. Multiple insertions over a wide area of suspected enemy locations increases the probability of contact without decreasing effective combat power. Once contact is gained, reinforcing elements could rapidly deploy at decisive points, instead of spending time searching for the enemy.

RECOMMENDATION: That the technique of multiple platoon-size airmobile insertions over a broad area of likely targets be employed.

(2) (C) Parakeet Operations

OBSERVATION: The Parakeet operation employs a six man Ranger Team, one UH-1D slick, and two Cobra gunships. Once a target has been detected the operation is conducted like an airmobile raid, utilizing a rapid insertion, violent action on the target, and then an extraction. The gunships provide additional firepower to sustain the operation.

RECOMMENDATION: That units continue to develop this technique and make its results known to other US and ARVN units.

(3) (C) Return of Detainees to Brigade IPW

OBSERVATION: Frequently detainees, thought to be innocent civilians, have been released by units in the field, only to learn later that they were actually VC.

EVALUATION: In the guerrilla type warfare encountered in the Delta, it is often impossible to distinguish the VC from a civilian by means of dress, age, identification papers, or sex. Many VC have been discovered with legitimate GVN identification papers. On several occasions personnel have been released in the field, only to discover at a later date that these personnel were VC.

RECOMMENDATION: All detainees regardless of age, sex, or identification papers should be evacuated for questioning by IPW teams. (See also para 2d(2) below)

(4) (C) Stay Behind Ambush

OBSERVATION: The stay-behind ambush has proven very effective.

EVALUATION: The VC employ the tactic of moving into the areas which have just been swept by US forces, believing that there will usually not be further operations in the area for a number of days. Small US elements left behind when the main force is extracted have been very successful in engaging the enemy.

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RGS CSFOR-65 (RL) (U)

RECOMMENDATION: That units continue to develop and refine this technique for further exploitation.

(5) (C) Night Search Operations

OBSERVATION: The use of night search operations has reached the point of diminishing returns in Dinh Tuong Province.

EVALUATION: The enemy has adapted his night movement tactics to cease movement and take available cover at the sound of any helicopter, making him virtually undetectable by night observation devices from aircraft.

RECOMMENDATION: Substitute the night raid for the night search technique, using ground troops to search out known or suspected LOCs, base camps, radar sightings, and ground sensor activations.

(6) (C) Booby Trap Clearing

OBSERVATION: Soldiers have been observed using the M79 grenade launcher to dispose of booby traps.

EVALUATION: The practice of using the M79 as a means to clear booby traps has proven to be highly dangerous. On two occasions during the reporting period, members of infantry units were observed using this method. On both occasions, injuries were sustained by personnel in the area. The expected size of secondary explosions and poor judgement as to what protective cover should have been taken were the main factors for the injuries in both cases. The proper use of demolitions or a grappling hook are far safer methods of clearing booby traps.

RECOMMENDATION: All personnel should be forbidden to use the M79 grenade launcher as a means to clear booby traps and should be instructed in the approved methods of booby trap clearing.

(7) (C) Main Gate Facilities

OBSERVATION: The main gate facilities at Dong Tam were inadequate for proper processing of the 3500 Vietnamese civilian employees and hundreds of military and civilian vehicles entering and leaving the base daily.

EVALUATION: A ~~new~~ gate building was constructed to permit a more detailed search of employees and expedite pass exchange. An additional access road was constructed on the west side of the gate house to permit segregation of military and civilian vehicular traffic, thereby easing the usual congestion during peak hours.

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (R1) (U)

RECOMMENDATION: None.

(8) (C) Command Posts

OBSERVATION: The 2d Brigade operated two battalions based aboard the Mobile Riverine Base Ships and one land-based battalion in Kien Hoa Province. A Joint Tactical Operations Center (Army-Navy JTOC), heavy in operations personnel, worked aboard the USS Benewah. A second Tactical Operations Center, heavy in intelligence personnel, operated at Ben Tre.

EVALUATION: Two full-time command posts provided the Brigade Commander with effective command, control, and communications generally near any significant contact, regardless of adverse weather conditions encountered during the monsoon season, and without significant increase in personnel requirements. The focus of intelligence effort was at the most effective source of such information, the Sector TOC, while planning and operational coordination were accomplished readily in the JTOC.

RECOMMENDATION: That multiple command posts be considered a valid concept where conditions (weather, dispersion, area of operations) make them advisable.

c. (U) Training: None.

d. (C) Intelligence

(1) (C) Aerial Photographic Coverage During Monsoon Season

OBSERVATION: 9 X 18 format photography taken during the increased cloudiness of the monsoon season often results in poor imagery quality.

EVALUATION: Poor quality photography with excessive cloud cover during the monsoon season is produced because of altitude at which the picture is taken and camera focal length required for a usable scale.

RECOMMENDATION: The use of 9 X 9 format, supplemented by low panoramic and oblique photography will produce better results during this climatic period. However, low pan and oblique format photography do not permit the assembly of mosaics.

(2) (C) Evacuation Channels for Innocent Civilians

OBSERVATION: Local Vietnamese authorities are the most reliable identifiers of Viet Cong Infrastructure (VCI).

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFCR-65 (R1) (U)

EVALUATION: Not all VC can be identified by IPW questioning techniques. The higher level infrastructure personnel are of high intelligence and usually have a well rehearsed cover story and legitimate identification papers.

RECOMMENDATION: All detainees classified as innocent civilians should be returned to the local authorities in the area of capture. Many VCI have been identified at the local level by face to face contact with police and GVN authorities.

(3) (C) Evaluation of Red Haze Missions

OBSERVATION: Red Haze readings may give false indications of enemy presence.

EVALUATION: Red Haze Sensors have been known to record heat returns from burning and smouldering rice stacks and field rubble. During the dry season in the Delta, there is considerable intentional burning of fields for agricultural purposes, and grass fires in the Plain of Reeds are continuous. The smouldering area left after a burn off produces an image much like camp fires. Also during the rainy season, many Vietnamese farmers burn smudge fires in and around their dwellings to drive off mosquitoes. The most reliable Red Haze readings are those on canals indicating motorized sampan movement.

RECOMMENDATION: Past experience has revealed that all heat returns on a Red Haze mission are not necessarily of military significance. Imagery interpreters should consider this possibility when interpreting Red Haze missions.

(4) (C) Aerial Photography Requirements

OBSERVATION: Use of aerial photography in combat operations has not been adequate for quick reaction targets.

EVALUATION: Due to the short reaction time of combat operations to intelligence, normal Air Force photographic coverage has not proved timely and in many cases gives inadequate coverage of a particular area. The hand-held camera program available through Military Intelligence Battalion (Aerial Reconnaissance Support) assets has proved very valuable for giving the ground commander a real time study of terrain and fortifications in a particular area.

RECOMMENDATION: That more facilities be established for the faster, more exploitable, hand-held camera photo coverage.

(5) (C) Ground Intrusion Detectors (Duffle Bag)

OBSERVATION: Ground intrusion Detectors were effectively employed to

AVDE-MH

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (R1) (U)

15 July 1969

assist in target acquisition, early warning, and force conservation.

EVALUATION: Successful planning and installation of sensor fields permitted the brigades to monitor selected areas for enemy movement. These sensor fields were used in conjunction with other intelligence for acquisition of artillery and airmobile targets. Troop units were employed 600 meters or more from sensor fields, using the field as an early warning device and permitting artillery fire to engage the field area. This method enabled the ground troops to react rapidly or prepare to ambush enemy moving in their direction. Sensor fields were also used as an aid to troop conservation by employment on known base areas, LOCs, and infiltration routes. This eliminated the need for troop operations to monitor enemy movement. In most cases of activation, VT artillery was fired on the field location. Unfortunately, on some occasions, quick fuze artillery and 2.75 rockets were fired on the fields thereby destroying the equipment.

RECOMMENDATION: Maximum employment of the Ground Intrusion Detectors for beneficial surveillance of desired areas is recommended.

(6) (C) Agent Nets

OBSERVATION: US operated Intelligence Agent Networks have been determined to be unreliable and possibly used as part of a VC deception operation.

EVALUATION: US operated Agent Networks in Dinh Tuong Province gain most of their information through elicitation. The rural areas of the province are mostly populated with VC dependents, sympathizers, infrastructure, intelligence agents and guerrillas. When a subagent elicits information from these people, they usually receive what information the VC want them to have. US Nets were required to meet a prescribed number of agent reports per month. This prevented selectivity and upgrading of reliable sources due to the requirement to expand networks to meet production standards. Agent handlers were not able to properly analyze and evaluate reports due to the volume.

During the months of November 1968 through January 1969, these agents continued to report Main Force units throughout the TAOI. From 14 November 1968 until 30 June 1969, no significant contact was made based on these agents' reports. Captured documents, contacts, PWs, ralliers, and reliable intelligence confirmed that many of the units, (continually reported by agents) had been absent from the province prior to February 1969. The continual reporting prevented detection, by agent reports, when the Main Forces returned to the TAOI prior to the Post Tet (23 Feb 69, Winter-Spring) offensive. Lack of contact with some of these units since early April indicated that these units left the TAOI again. Through three Third Party induced Hoi Chanhs, who were actually VC agents attempting to infiltrate friendly units as Kit Carson Scouts, it was learned that the US handled agent who induced them was a VC intelligence agent.

~~CONFIDENTIAL~~

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (R1) (U)

RECOMMENDATION: That a thorough area study be made prior to determining what type reports will be acceptable. Elicitation works well in some parts of Vietnam; however, in an area largely controlled by the VC, penetration and infiltration agents provide the most reliable intelligence. This type agent net requires more planning and more time to establish, but is well worth the effort. Intelligence agents should be required to provide intelligence only. Additional requirements such as the Third Party Inducement Program endanger the agent, reduce the agent's effort to produce intelligence, and increase the probability of falsified reports. Agent handlers must be permitted to concentrate on obtaining reliable reports through developing good agents. No volume requirements should ever be imposed on agent networks. A few delayed or "untimely" reports, gained through personal clandestine observation, are much more valid than reports gained by asking a fisherman if he has seen any VC. To be effective, agent handlers should keep abreast of the tactical situation and maintain records of other intelligence gathering sources in order to adequately evaluate their agents.

e. (C) Logistics

(1) (U) Road Construction

OBSERVATION: Roads using paddy fill for base material hold up quite well during the wet season if care is taken in their construction.

EVALUATION: A road base made of paddy fill can be made by dozing fill from both sides of the road. The base is made in six inch layers with extreme care being taken to insure that each layer is properly compacted. Ideally, each level should be stabilized with lime, however lime is not always available or economical. When the required road elevation is reached, the surface is graded and then capped with two 3 inch lifts of  $1\frac{1}{2}$  inch minus rock. Each layer of rock should be properly rolled.

RECOMMENDATION: With proper care taken in construction, the above method will produce a tactical road capable of handling traffic in all types of weather. This method should be considered when planning programs of tactical road construction since it is not as time consuming and does not require special equipment.

(2) (C) Road Maintenance

OBSERVATION: The establishment of secondary roads within the division TAOI have enough rock and laterite in their surfaces to require only periodic grading during the wet season.

EVALUATION: Heavy rains and heavy military traffic will cause secondary

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (RL) (U)

roads to deteriorate if the crown of the roads is not maintained. If ruts are allowed to form, the road will become impassable. By simple periodic upgrading, the crown of the road may be maintained; and, if ruts are graded out as they appear, the road may be kept passable.

RECOMMENDATION: An effective program of periodic road maintenance should be established within the division TAOI. By this means, a great many road problems may be taken care of before they become serious.

(3) (C) Equipment Losses - Medical Evacuation

OBSERVATION: Equipment evacuated with medically evacuated personnel was often lost.

EVALUATION: In most instances the equipment of medically evacuated personnel was evacuated with the individual. A lack of proper accountability for this equipment at the hospital resulted in unnecessary paperwork. Each unit attempted to pick up evacuated equipment, but found that the equipment had disappeared prior to the unit representative's arrival at the hospital.

RECOMMENDATION: That more stringent accountability procedures be employed at the hospital to insure that evacuated equipment is immediately identified with the evacuated individual and that this equipment be turned over to authorized personnel only.

f. (U) Organization: None

g. (C) Other

(1) (U) Communications: Frequency Interference

OBSERVATION: Considerable frequency interference has occurred on the high frequency band of the AN/VRC-46. It was noticed that the interference occurred more frequently when switching from secure voice to normal operation.

EVALUATION: When operating the radio set in the non-secure mode, the X-mode/normal switch must be in the normal position.

RECOMMENDATION: To determine the switch positions, place the squelch in the new "off" position and remove the retaining cap from the X-mode cable connector. If rushing noise does not occur, the radio set is in X-mode condition.

(2) (C) Berm Construction

OBSERVATION: The heavy monsoon rains quickly erode steep walled berms

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (RI) (U)

thus exposing personnel and equipment to direct enemy fire.

EVALUATION: Obviously, a gradual slope on berms would decrease the tendency to erode, but this may not be practicable due to the large amount of space necessary to build such a berm. If one slope of the berm is reveted, this area may be cut in half. Various means of stabilizing berms could be used also to prevent erosion and decrease the amount of maintenance required to maintain the berm.

RECOMMENDATION: The interior slope of all berms should consist of some type of revetment if space is limited. The slope of the berm should not exceed 20 per cent. Also, grass should be planted on the outer slope to further prevent erosion.

(3) (U) Grass Cultivation

OBSERVATION: Heavy rains continuously wash away grass seed planted on a steeply inclined surface, thus hindering attempts to stabilize the surface.

EVALUATION: Some means of retaining the grass seed on a slope should be used. Typical means, such as the use of straw or burlap, are not effective because they do not last long enough in the climate of the Mekong River Delta. The application of a thin layer of penepime over the freshly planted grass seed is effective, but wears away with repeated heavy rains. It has been found that repeated applications of penepime do not prohibit the growth of grass if the applications are applied thinly and over a period of time determined by the amount and intensity of local rains.

RECOMMENDATION: Grass seed can be retained on an inclined surface, if penepime is continuously applied to the area on a scheduled basis determined by local weather conditions.

(4) (C) Force Status (FORSTAT) Procedures

OBSERVATION: Under present FORSTAT procedures, units may be required to maintain unneeded and unwanted items.

EVALUATION: At present, commanders are required to keep and maintain all RICC-1 items, regardless of their necessity, solely to maintain a high REDCON. Many RICC-1 items not required in a particular location may be critical in another area of the command. Also, under the present system an organization may be very close to a C-2, but actually rated on a C-3, because of a few unneeded and unwanted items, e. g., cipher machines, and radiacmeters in a maintenance battalion.

AVDE-MH

15 July 1969

SUBJECT: Operational Report of 9th Infantry Division for Period Ending  
30 June 1969, RCS CSFOR-65 (R1) (U)

RECOMMENDATION: That commanders be given some leeway in deciding which RICC-1 items are actually critical. They should not be penalized for not having equipment for which they have no use.

(5) (C) Inspection of Equipment

OBSERVATION: Upon receipt of redeployment instructions, a planning group was established at Dong Tam by USARV composed primarily of 1st Logistics Command personnel. The 1st Log Command brought with them some 50 enlisted men, mostly inspection and classification personnel, to handle the large quantity of equipment to be transferred to USARV as a result of the inactivation of one brigade and the schedule of USARV critical items. These personnel were set up within one of the forward support companies of the Maintenance Battalion to assist with inspection and classification of equipment being turned in.

EVALUATION: Although the 1st Log Command personnel worked within the existing command structure, they were not under its direct control. What developed was a dual chain of command that reached all the way down to the individual soldier working at the inspection point. This caused some problems for the division, since the 1st Log Command personnel did not, in all cases, follow division policy. It caused more serious problems for the 1st Log personnel who were trying to accomplish their mission, since they did not have control over all personnel.

RECOMMENDATION: If similar conditions exist when other divisions redeploy, it is recommended that the logistical support furnished the division for redeployment be attached to the division and integrated into its existing command and control structure. The 1st Log coordinating group could be set up within the DISCOM Headquarters and the DISCOM XO given primary responsibility. Ideally, one of the forward support companies of the maintenance battalion should be relieved of its mission and that brigade's support picked up by the rest of the battalion and by 1st Log maintenance units. This company could then be augmented by a packing and preserving platoon, and given the responsibility for inspection and classification of equipment. Other 1st Log augmentation needed would be requested by the coordinating group in DISCOM Headquarters and attached directly to DISCOM units. Policies, directions, and requirements would then be passed through this group who would have the authority of the command chain. The only personnel who should not be attached to, and under the control of, the division would be the chief inspector for each commodity area, who would establish standards for equipment being turned in through 1st Log channel.

30 June 1969

2. (C) Personnel Management

a. Specialty Pay: This headquarters received Change 30, AR 600-200 on 20 May 1969, which required that Speciality Pay (P1-P2-P3) authorized several MOSs was to be terminated effective 1 July 1969. Through liaison with Division Finance, a Machine Branch Roster was obtained of all personnel receiving Proficiency Pay. Since the roster did not include MOSs, it was necessary to screen records of individuals on the roster for their MOSs and eligibility to receive Specialty Pay. This information was further screened for personnel holding MOSs in which Specialty Pay was to be terminated. These personnel were notified by letter of the changes in their Proficiency Pay status and necessary orders were published effecting these changes.

b. Local Testing Program: Since Dong Tam had no facilities for testing in Army Classification Batteries (ACB), ALAT, Flight Aptitude, and other specified areas, personnel needing such testing were required to travel to Long Binh to take these tests. This usually resulted in from three to five days time lost from the division mission. Through coordination with HQ, USARV, the 9th Division was issued test materials and was authorized to administer these tests at Dong Tam, eliminating the need to travel to Long Binh for the testing. The local testing program has been highly successful. It has been particularly important in qualifying division personnel for reenlistment through re-testing in ACB and has significantly contributed to the 9th Division maintaining its lead in reenlistments.

c. Automatic Data Processing Activities:

(1) During this reporting period, the AG Administrative Machine Branch was relieved from the PERMACAP mission due to the redeployment of the 9th Infantry Division. The primary mission of this section was to provide the division AG section with punch cards and listings on personnel redeploying.

(2) The Administrative Machine Branch was relieved of PERMACAP duties on 1 June 1969. On the same day, the Data Service Center, USARV assumed the responsibility of reporting the 9th Infantry Division's personnel to Department of the Army and forwarding personnel status cards to new units.

d. Personnel Actions: The Army Emergency Relief Drive material was received in May 1969 and a letter providing command emphasis for the drive was published in June. The campaign was initiated 15 June 1969 and will end 15 August 1969. As of 30 June 1969, \$7,042.40 has been collected.

e. Reenlistment activities:

(1) During the period 1 May through 30 June 1969, the Division Reenlistment Section effected 220 reenlistments, thereby achieving first place in the USARV reenlistment competition. Of this number, 102 were first term RA, 70 were AUS, and 48 were career RA.

CONFIDENTIAL

30 June 1969

(2) This outstanding accomplishment can only be attributed to a combination of the following factors.

(a) Command Support

(b) Production of posters, daily bulletin notices, and brochures. These advertising media were principally designed to maintain a feeling of reenlistment mindedness among all officers, key NCOs, as well as the entire enlisted body of the 9th Infantry Division.

(c) Active pursuit of the Reenlistment Program by full-time Division Career Counselors who make frequent visits to all areas of operation within the 9th Infantry Division, for the purpose of urging all commanders to improve the overall program through team spirit, as well as making numerous talks to company and platoon formations.

(d) Sending out messages to all commanders, keeping them abreast of the reenlistment competition within their category.

(e) Careful planning and long hours of hard work on the part of the Division Reenlistment personnel as well as additional duty unit reenlistment NCOs.

3. (C) Development and Management of Morale

a. Special Services Activities

(1) Facilities

(a) Swimming Pool: The Special Services Swimming Pool was closed during the period 22-24 June 1969 and 29 June - 1 July 1969 and 8 July 1969 because of mechanical problems with the swimming pool pump and electrical power failures in the Community Service Center area.

(b) Service Club: The Special Services Ponderosa Services Club held ping-pong tournaments monthly, presented four theme parties monthly, and ran two movies weekly during the reporting period. During the period a karate demonstration was also presented. The Ponderosa Service Club was closed on 16, 20, 29, and 30 June, due to a power failure in the Community Service Area.

(c) Craft Shop: The Special Services Craft Shop Photo Lab was closed on 9 and 16 June 1969 because of mechanical problems with the print dryer. The Craft Shop was also closed on 23, 29, and 30 June 1969 due to the power failure in the Community Services Area.

(2) Entertainment

Marvin Miller	22 June 1969
NBA All-Stars	26 June 1969

(b) Command Military Show:

<u>SHOW</u>	<u>DATE</u>
The 24th Hour	13 May 1969

(3) Rest and Recuperation (R&R) Allocations and Utilization:

<u>MONTH</u>	<u>ALLOC</u>	<u>USED</u>	<u>% of ALLOC</u>
May	1586	1694	106.5
June	1460	1560	106.8

(4) Sports: Special Services conducted a football league 17 April - 12 June 1969. A post season single elimination softball tournament was held 16 June - 26 June 1969. The 9th Infantry Division participated in the 7th Infantry Division (ARVN) Cross Country track meet at My Tho on 3 May 1969. Boxing matches continued to be held every Friday night.

b. Postal Activities

(1) During the past quarter, an additional mail call was instituted. Mail clerks are now able to pick up the majority of their letter mail and parcel post at 1100 hours daily. The remainder of the mail is received at 1500 hours daily. Improved transportation routes and facilities made possible the early arrival, breakdown, and distribution of mail for the division. The afternoon mail call is necessary as the vehicle (2½ ton van) cannot leave Saigon until the arrival of the Stars and Stripes, thus delaying arrival at the APO.

~~CONFIDENTIAL~~

~~CONFIDENTIAL~~

30 June 1969

(2) All required unit mail room inspections for the quarter as well as necessary re-inspections when units did not satisfactorily provide service.

(3) Provisions for mail service during and after redeployment have been made as follows:

(a) At present, 96370 is an operational APO while 96371, 96372, and 96373 are mailing addresses only, MAO 96370 is the serving APO for the three MAOs.

(b) APO 96370 and MAO 96373 will be moved to Hawaii upon arrival of the last divisional unit at that station. Division headquarters and support units will use 96370 for mailing address and the 1st Brigade units will use 96373. At this time 96370 will also become an MAO served by APO 96557.

(c) MAO 96372 will be closed effective upon the movement of the last 2d Brigade unit from RVN.

(d) MAO 96371 will be made an operating APO upon organization of the separate brigade remaining in RVN. Fixed credit, money orders, and postal equipment will be obtained from supplies currently available at APO 96370. Items in excess of 96371 needs will be returned to Hawaii with 96370.

c. Awards and Decorations: The table at the end of this inclosure lists the awards and decorations presented to personnel in 9th Infantry Division units.

d. Religious Services: The following are statistics of the religious activities for the period 1 May - 30 June 1969:

	<u>PROTESTANT</u>	<u>CATHOLIC</u>	<u>JEWISH</u>	<u>TOTAL</u>
Number of Services	1089	595	7	1691
Attendance	18,462	13,608	70	32,140
Memorial Services	44	41	0	85
Hospital Visits	356	173	0	529

e. Red Cross

(1) Red Cross support rendered during the reporting period was as follows:

	<u>CASES</u> <u>HANDLED</u>	<u>LOANS/</u> <u>GRANTS</u>	<u>AMT</u>	<u>ADVANCES</u> <u>BY CHPTS</u>	<u>AMT</u>	<u>EMERG</u> <u>LVS</u>	<u>EMERG</u> <u>REPTS</u>	<u>CLUBMOBILE</u> <u>CO VISITS</u>
May	1376	36	\$5150	3	\$ 550	142	961	252
June	1389	30	\$4525	3	\$1100	130	1042	249

~~CONFIDENTIAL~~

30 June 1969

(2) The case load and services rendered by the 9th Division Red Cross during the reporting period did not significantly increase since the previous reporting period. The statistics shown above are considered normal for a demand of this size.

(3) The loans made above were all made to personnel going on emergency leave.

(4) The chapter advances are deposits made by families in CONUS for personnel going on R&R.

(5) On 23 June 1969, the Division Red Cross unit gave its last briefing to incoming personnel at the Reliable Academy. Until that time, an average of four to six briefings were presented each week at Reliable Academy. During the latter part of June 1969, at the unit commander's request, briefings were presented to three units being reassigned within the division.

f. Army Education Center

(1) Introduction: The Army Education Center, 9th Infantry Division, has the primary mission of offering military personnel the opportunity to remedy educational deficiencies. Students may pursue an educational program leading to a high school certificate or a college degree. In addition, the Army Education Center is charged with the secondary missions of offering courses in foreign languages, MOS-related courses, instruction in basic English to Tiger Scouts, and assistance to those who plan to enroll full-time in civilian schools, whether through the Army's "Bootstrap" Program or upon discharge from the service.

(2) Organization and Personnel: The center is an integral unit which consists of an Education Director (DAC) and six enlisted men. Five of the six enlisted men hold college degrees, and four of the five hold certified teaching certificates. The NCOIC with assistance of one enlisted man work together in the Core-GED Program. Two others work as a testing team in the field. One works with the Tiger Scout Program, and one is in charge of proctoring tests given on the base. All of these men are qualified and trained to work in all phases of the GED Program.

(3) Operations:

(a) The previous Education Director, Mr Russel S. Johns, was transferred from Dong Tam to HQ, 1st Log Command, Long Binh, 22 June 1969. His replacement, Lloyd B. Kidder, assumed responsibility as the GED TCO on 22 June 1969.

(b) The three Porta-Kamp classrooms and the Customhouse Language Laboratory were used as follows:

~~CONFIDENTIAL~~

~~CONFIDENTIAL~~

30 June 1969

1 The Customhouse Language Laboratory were used daily to administer USAFI high school and college tests. Upon the arrival of tape recorders for language study, it will be used as a language laboratory.

2 The first Porta-Kamp classroom was used for University of Maryland classes four nights a week. It was also utilized during the daylight hours from time to time by AG for administering Army Personnel Tests, group meetings, and other special events.

3 The second Porta-Kamp classroom served a dual purpose: one end was set up as a typing laboratory and was utilized each morning for instruction of military clerks. The other end was set up as a small classroom and was used to assist educationally deficient personnel in the Core-GED Program. The typewriters were used in the afternoons by typists from the AG Awards and Decorations section.

4 The third Porta-Kamp was used for instruction of Tiger Scouts in Basic English.

(c) The Army Education Center continued sending a two-man testing team to outlying bases whenever men, because of tactical functions of the infantry, found it impossible to come to the center. Fifty individuals took 241 tests of the high school GED batteries at Tan Tru and Rach Kien, while 38 individuals took 165 tests of the same type at Tan An.

(d) The University of Maryland's two college-level courses for Dong Tam, B. A. 130 Business Law and B.A. 10 Business Enterprise, were completed 24 May 1969. Twenty-four had enrolled and 18 finished the classes. Two more classes were approved and started: B. A. 181 Business Law and History 21 History of the United States to 1865. The latter two classes will be completed 26 July 1969. There were 24 enrolled.

(e) Beginning 1 July 1969, all classes, except the University of Maryland, will be discontinued at the center in Dong Tam. GED testing for high school certificates and the CLEP-GE tests will be continued on a daily basis, and those desiring correspondence courses may enroll. The reason for the curtailment action is due to the redeployment of the 9th Infantry Division and the relocation of the Army Education Center from Dong Tam to Can Tho on or about 31 July 1969.

4. (C) Maintenance of Discipline, Law and Order: Analysis of quarterly offense statistics for the last two quarters of the FY 1969, reflects a continuing downward trend. This general trend is primarily attributable to total commitment in combat operations and the lack of free time available to the soldiers. All offense categories with the exception of miscellaneous offenses, decreased significantly during the reporting period. Strong command emphasis on suppressing the possession and use of marijuana resulted in a striking increase in the apprehension of offenders. Another area showing significant

~~CONFIDENTIAL~~

~~CONFIDENTIAL~~

30 June 1969

offense increase was the illegal disposition of government property through the US mail. This was the direct result of increased activity on the part of the postal authorities in CONUS.

BASE OPERATION

1. (C) Base Development, Dong Tam, RVN

a. With the announcement that the 9th Infantry Division will redeploy out of Dong Tam, all vertical contract construction has been terminated.

(1) The following facilities were under construction:

- (a) Post Exchange
- (b) Two Chapels
- (c) EOD Bldg

(2) The following facilities were completed after the redeployment was announced due to the advanced state of construction and essentiality of the facilities:

- (a) Electrical hookup to 27 Unit Maintenance Buildings
- (b) Fire Crash and Rescue Building

(3) The following approved facilities had not been initiated and are cancelled:

- (a) NCO Club
- (b) Cafeteria Expansion
- (c) Officer's Club

b. Two horizontal contract projects are currently under construction:

(1) Asphalt paving of roads (3.4 miles completed).

~~CONFIDENTIAL~~

~~CONFIDENTIAL~~

(2) Paving of drainage ditches, 5% completed, will continue to completion.

(3) ASP-80% completed, will continue to completion.

c. All troop construction projects have either been cancelled or modified due to the redeployment of the Division:

(1) Protection for FOL tank farm terminated.

(2) Extension and Paving of fixed wing strip - modified to reduce length of runway and eliminate the parking apron.

2. (C) Base Development, Tan An, RVN

a. CD-10-296-01, Miscellaneous Facilities for Tan An (Airfield).

(1) Aircraft Direct fuel facility: 0%.

(2) Open Storage: 0%.

(3) Co Orderly/Supply Room: 100%, 1,920 SF.

(4) EM Billeets: 100%, 23,100 SF.

(5) Latrines and Showers: 50%, 1,423 SF.

(6) BOQ: 100%, 2,970 SF.

(7) Electrical Distribution: 0%.

b. CD-10-295-01, Cantonment Facilities for 709th Maint Bn:

(1) Ord Field Maintenance Shop: 95%, 4,000 SF.

(2) Ord General Purpose Warehouse: 95%, 4,000 SF.

~~CONFIDENTIAL~~

~~CONFIDENTIAL~~

- (3) Open Storage: 0%.
  - (4) Co Orderly/Supply Room: 100%, 960 SF.
  - (5) BEQ: 100%, 6,700 SF.
  - (6) BOQ: 100%, 660 SF.
  - (7) Mess Hall: 98%, 2,400 SF.
  - (8) Latrines and Showers: 0%.
- c. CD-10-286-01, Earth Fill: 75% complete.

3. (C) Construction Directive 525-0303-0-01, 824 Man Cantonment, Tan An, was published by USAFCAV on 4 July 1969. This CD will provide the necessary facilities for the reorganized 3rd Brigade/9th Infantry Division. Additional facilities are:

- a. BEQ - 48,000 SF.
- b. BOQ - 16,000 SF.
- c. Admin Bldgs - 20,000 SF.
- d. Warehouses - 11,520 SF.

4. (C) PX Operations:

a. The volume of Retail Sales during the reporting period were as

follows:

	DONG TAM	TAN AN
1-31 May	\$ 629,599.93	\$ 125,377.18
1-30 June	<u>556,676.91</u>	<u>140,467.41</u>
TOTAL	\$1,186,276.84	\$ 265,844.59

~~CONFIDENTIAL~~

~~CONFIDENTIAL~~

b. The volume of concession sales and services for the reporting period was as follows:

	DONG TAM	TAN AN
1-31 May	\$ 337,444.65	\$ 23,793.45
1-30 June	<u>304,520.62</u>	<u>29,192.30</u>
TOTAL	\$ 641,965.27	\$ 52,985.75

c. The volume of Class VI sales for the reporting period was as follows:

	DONG TAM	TAN AN
1-31 May	\$ 362,173.04	\$ 75,997.30
1-30 June	<u>294,383.63</u>	<u>70,946.00</u>

DEPARTMENT OF THE ARMY  
HEADQUARTERS 1ST BRIGADE  
9TH INFANTRY DIVISION  
APO San Francisco 96373

AVDE-1A-T

30 June 1969

SUBJECT: Operational Report for Quarterly Period Ending 30 June 1969(RCS/CSFOR-65) (UIC - WDFZTO) (U)

Commanding General  
9th Infantry Division  
ATTN: AVDE-1A  
APO 96370

SECTION I

Significant Organization/Unit Activities

1. (C) INTRODUCTION: During the reporting period 1 May - 30 June 69, the First Recono Brigade continued Operation Quiet Thang (including Operation Speedy Express) which was initiated on 1 January 69. Operation Speedy Express terminated 31 May 1969 and Operation Rice Farmer began 1 June 69, both operations being part of Operation Quiet Thang. The brigade mission was to conduct strike operations in Dinh Tuong and adjacent provinces, block enemy lines of communications, assist the Government of Viet Nam in its accelerated pacification campaign, and be prepared to move and strike any enemy position within the IV Corps Tactical Zone. Additionally, the brigade was prepared to conduct spoiling attacks and block enemy movement south of Saigon in the event of an enemy attack on the capital. The mission remains unchanged at the close of this reporting period. Increased emphasis on combined operations with ARVN and RF/PF elements have proven successful in destroying enemy main force units and especially eliminating communist infrastructure. Psychological and civic action projects have been employed by all brigade elements to support or complement tactical operations or pacification efforts. The brigade engineer resources, coupled with massive self help efforts, have upgraded road networks and improved fire bases to withstand enemy attacks as well as the coming monsoon rains. Renewed emphasis on unit and individual training has brought the level of performance to a new high at the close of this reporting period.

DOWNGRADED AT 3 YEAR INTERVALS

~~CONFIDENTIAL~~  
SUBJECT: Operational Report for Quarterly Period Ending 30 June 1969 (RCS/CSFOR-65) (UIC - WDFZTO) (U)

## 2. (C) ORGANIZATION:

a. During the period 1 May to 30 June 69, the Reconco Brigade continues Operation Quiet Thang in Dinh Tuong Province with four infantry battalions (2-39, 3-39, 4-39, and 6-31) and OPCON of one air cavalry troop or team each day. The 6-31st Infantry continued the DEFENSE AGAINST ROCKET/MORTAR ATTACKS (DARMA) mission in AO Kudzu around Dong Tam Base for their reporting period.

b. The following inclosures are attached:

- (1) Inclosure 1, Organizational Structure
- (2) Inclosure 2, Roster of Key Personnel
- (3) Inclosure 3, Map of Brigade Tactical Area of Interest (TAOI)
- (4) Inclosure 4, Enemy Unit Locations Dinh Tuong Province
- (5) Inclosure 5, Enemy Unit Locations Go Cong Province

3. (C) PERSONNEL AND ADMINISTRATION: COL JOHN G. HAYES has commanded THE RECONCO BRIGADE throughout the entire reporting period. The battalion commanders and changes for the reporting period are reflected on Inclosure 2, Roster of Key Personnel.

## 4. (C) INTELLIGENCE:

a. During the reporting period, four of the ten Communist Main Force and Local Force Battalions operating in the 1st Brigade Tactical Area of Interest (TAOI) were contacted by 1st Brigade or Allied Forces. Captured documents and reliable intelligence reports located an additional two Battalions. The most significant contact was with the 261A Battalion on 22-23 May via WS9844, resulting in 111 VC KIA/KBA. Only light sporadic contact was enjoyed with elements of the 273 Binh Duc Artillery Battalion, 502 Kien Phong Provincial Mobile Battalion, and 514 C Dinh Tuong Provincial Mobile Battalion. Only a few of the Main Force Sapper Companies were contacted. The Headquarters Elements of the 261B and 267B Battalions were located by reliable intelligence and agent reports. The 261B was last located on 27 April and is believed to have since moved to Cambodia. The 267B Headquarters remains within five kilometers north of My Tho but it is believed to have also sent its infantry companies back to Cambodia. The 263, 514A and 514B Battalions have not been located during the reporting period and due to continuous allied pressure, have probably withdrawn to safe areas. The 504 Kien Tuong Provincial Mobile Battalion was not contacted during the period even though extensive jitterbug operations were conducted in the northern Plain of Reeds along the Cambodian border. This unit is still held to be in the "Crows Nest" area of Cambodia. The enemy initiated high points for June began on 5 and 17 June and were much lighter and of shorter duration than previous high points. These high

SUBJECT: Operational Report for Quarterly Period Ending 30 June 1969 (HCS/USFOR-65) (VIC - WDFZTO) (U)

points consisted of light indirect fire attacks and ground standoffs or probe attacks scattered throughout the TAOI. The indirect fire attacks were limited by ammunition shortage due to extensive operations along enemy LOC's preventing resupply activity.

b. Enemy operations appeared to be directed more against pacification areas and the interdiction of Highway 4. After failure in most of his attempts, the enemy withdrew most of his Main Force units or broke down into small elements to avoid contact and adopted a "wait and see" attitude toward 9th US Division re-deployment. He continued to exploit the relaxation of security when given the opportunity to conduct guerrilla type, violent, fast raids against ambushes and sweeps.

c. Enemy losses for the period 1 <sup>MAY</sup> April to 30 June: (see pages 546)

d. The most reliable sources of information concerning the enemy continues to be usually reliable intelligence reports, captured documents, and detainees. Casual sources provided some occasional good information to ICAI operations and principal agents. Much of the information was confirmed by exploitation operations accompanied by the source. Information provided by US/Allied intelligence agents arrived in good time but continued to report fairy tales which were confirmed untrue by combat operations and ground surveillance equipment.

e. Ranger activities converted from intelligence gathering to hunter-killer operations.

f. Red Haze reliability improved slightly during the reporting period due to the increased water in the fields, decreasing grass and rice straw fires. Red Haze flights prior to 2400W continued to be loaded with civilian swadge fired to combat increase in mosquitoes. SLAR inflight readouts provided some exploitable reports and provided augmentation for other surveillance equipment. Aerial photography continued to be employed but was primarily employed with exploitation of Roi Chans and other sources who were unable to read maps but were able to "see" the terrain in an aerial photo. Hand held photos were more beneficial for target acquisition without a live asset.

g. The weather change to rainy season had an effect on footmobile operations due to foot problems caused by constant emersion. Thunderstorms and rain occasionally restricted airmobile operations due to reduced visibility and turbulence. Enemy operations were not hampered by weather and terrain conditions.

h. Summary of Enemy Situation: Scattered contacts throughout the TAOI continues to indicate the absence of all but two Main Force Battalions (261A and 273)

SUBJECT: Operational Report for Quarterly Period ending 30 June 1969 (US/USFOR-65) (UIC - WDFZRO) (U)

in the Provinces. It is probable that most of the Main Force units have withdrawn to regroup, recruit, retrain, and prepare for the next "offensive".

i. Capabilities: The Communist forces are capable of massing up to two regimental size forces in the TAOI within 48 hours. Due to heavy losses suffered in the past attempts, he is not presently expected to try again. He is capable of indirect fire attacks, of a limited scale due to ammo shortages, throughout the TAOI. The enemy is also capable of interdiction of LOC's but the recent capture mine caches has somewhat reduced this capability. He is also capable of continued propaganda, terrorist and sapper operations while realigning his political infrastructure.

j. Vulnerabilities: The VC are vulnerable to airmobile operations, artillery, and air strikes when he tries to mass his forces for ground attacks. His guerrilla forces and infrastructure are vulnerable to continued friendly pressure applied by airmobile, sweep, cordon and search, night search, and psychological operations, and to detection by radar and duffel bag with consequent artillery fire. There are recent indications that all enemy echelons are becoming more vulnerable to CA/PO operations even though the information of US withdrawal has been disseminated.

k. Probable Courses of Action: The VC are expected to continue to avoid contact. Token incidents to demonstrate their continued presence are expected. He is expected to exploit any relaxation of security with raid type attacks. This course of action is expected until the 1st Brigade is redeployed. After withdrawal, the VC will probably take on of the following courses of action.

(1) Attempt to attack the ARVN forces in the TAOI to demonstrate to the GVN that they are capable and to plant seeds of doubt in some GVN officials minds. After this attack he will probably concentrate on rebuilding his infrastructure and guerrilla forces to support a future country wide offensive.

(2) Stand-down until the US have withdrawn most of their troops from the country and then attempt a "take-over" to install his "shadow" government if a coalition government is not accepted. This would allow time to refit and rest while redeveloping the political infrastructure and guerrilla support forces. This course of action would be the most successful in the long run because it would expedite the withdrawal of US Forces and permit more complete preparation for a future take over attempt.

5. (C) OPERATIONS: During this reporting period the Recondo Brigade continued Operation Tuyet Theng which was initiated on 1 January 1969.

a. DARMA MISSION: The security mission for defense against mortar and rocket attacks on the Dong Tam base was assigned to the 6-31 Infantry on 1 April 69 and continues to operate in AO Kudzu at the close of this period. Although the primary mission of the Kudzu battalion is to conduct saturation patrols and fast mobile reconnaissance in force operations within AO Kudzu, occasionally other tasks such as cordon and search and limited strike operations are assigned. Much of the area in AO Kudzu has been under Viet Cong influence or, at least, contested for the past several years. The area is under an accelerated pacification program at this time and many combined operations have been successful in killing or capturing local guerrillas and communist infrastructure. Continual sapper and mine/booby trap activities around the Dong Tam base as well as indirect fire attacks on the 3rd Division base have caused numerous friendly casualties and a continued emphasis is placed on tactical superiority of the area. Additionally, frequent multi-battalion sweep operations are held to thoroughly search the area for weapons sites and enemy personnel. The most recent new tactic developed by the 6-31 is the utilization of longer than to conduct Parskeet Operations which has proven very successful.

**STRIKE OPERATIONS:** The remaining three maneuver battalions conduct air mobile assaults, bushmaster, Recondo checkerboard, riverine, cordon and search, night raids, and base security operations. Each battalion is based in a relatively self supporting fire support base and usually contains its operations within the government district in which it is located. The 4-39 Infantry (located in Gao Duc District) operated from Fire Support Base (FSPB) Danger throughout the reporting period. One company was used primarily as a night ambush company (Claymore Co.) while the other company missions varied from day to day. The 2-39 Infantry (located in Cai Be District) operated from FSPB Schroeder throughout the quarter. In addition to conducting air mobile operations within the Recondo Tactical Area of Interest (TAOI), the 2-39 Infantry concentrated on reconnaissance in force operations within Cai Be District and developed a most successful night raid technique using helicopter insertions of re-inforced rifle squads against enemy infrastructure areas. The 3-39 Infantry (located in Cai Lay District) operated from FSPB Moore. In addition to providing security for the Recondo Brigade forward at Moore, the 3-39 conducted air mobile strike missions and a variety of foot mobile reconnaissance in force missions throughout Cai Lay District. The brigade was supported by various army aviation elements daily; one assault helicopter company and an air cavalry troop or team provided the air mobility and aerial fire power for day air mobile operations. Further, an air cavalry troop or team operated almost daily to support night search operations.

c. **OPERATIONAL SUMMARY:** Due to enemy evasive tactics and fragmentation of main force units, there have been few major contacts during this reporting period. Numerous minor contacts have resulted from the use of target acquisition devices such as radar, air cavalry, airborne personnel detectors, and night observation devices employed in helicopters in the night search role.

At 090700 May 1969 Operation Rice Paddy Daddy was initiated vicinity WS9243. Elements of the 2-39, 4-39, and 12th ARVN Regiment participated. Excellent inter-allied co-operation resulted in destroying a known enemy base area. While ARVN and 2-39 forces cordoned and blocked the target area on D-day (9 May), the 4-39 conducted a massive sweep on D+1 (10 May). Results were:

2-39 Infantry 8 US KIA	4 VCK,	1 Chieu Hoi, 3 PW's
4-39 Infantry 1 US KIA, 6 US WIA	45 VCK	
12th ARVN RGT 3 KIA	<u>3 VCK</u>	
	52 Enemy Killed, 1 Chieu Hoi, 3 PW	

SUBJECT: Operational Report for Quarterly Period Ending 30 June 1969 (RCS/CSFOR-65) (UIC - WDFZTO) (U)

\*This operation disrupted the 261A in its staging area and proved to the populace of Giao Duc that the allies could clear the district of Viet Cong influence.

At 120915 May D Company 3-39 Infantry made contact with an estimated enemy company vicinity KS1945 sustaining 4 US KIA and 8 US MIA. A brief, but intense, fire fight resulted in 16 enemy killed. Three chicom pistols and numerous documents were captured.

Operation River Bend was initiated 200645 May with elements of 2-39, 3-39, and 12th ARVN RGT. Continuous contacts dating from November 1968 indicated that the enemy was staging in the Cam Son area. The results of infra-red, radio research, and visual reconnaissance supported intelligence estimates that the Cai Lay local force company had based vicinity KS1545. After an artillery prep and TAC AIR strike at 0645 hours, troops were air lifted into zones (North 2-39, Center 3-39, South 12th ARVN) sweeping East toward the B. Rai River. Air cavalry elements screened the river line while the sweep was conducted. Results of the combined operation were: 2-39 1 Tiger Scout KIA, 5 US MIA, 12 VCK, Dest 92 bunkers and 28 Booby Traps

3-39 1 US KIA, 13 US MIA  $\frac{9 \text{ VCK}, 4 \text{ WPNS CAPT}}{21 \text{ VCK}}$

On the evening of 21 May and early morning of 22 May elements of the 4-39 Infantry were infiltrated into blocking positions vicinity WS9844. A U-shaped block permitted the classic "hammer and anvil" technique to be applied with massive TAC AIR, artillery, and armed helicopter strikes. The element of surprise, combined with acute analysis of the battlefield, were the key factors in overwhelming the 261A main force Viet Cong Battalion. Results of this single battalion operation were 117 enemy killed with only 4 US wounded.

(1) US Losses this quarter: 34 KHA, 350 MIA

(2) Enemy Losses: 2169 VCK, 96 PW's, 12 Hoi Chanh, 297 Weapons

d. Combat After Action Report for Operation Quiet Thang (Including Rice Farmer) will be submitted under separate cover upon termination of the operation.

e. COMBAT SUPPORT ACTIVITIES:

(1) ARTILLERY SUPPORT: 1st Bn 11th Arty D. S.

## (4) NAVLA FIRE SUPPORT: N/A

(5) CHEMICAL SUPPORT: Although almost daily use was made of the airborne personnel detector (People Sniffer), no use of tactical CS was reported. (Quite often small amounts of CS were dropped by supporting air cavalry elements).

6. (C) TRAINING: Operational commitments have restricted training in the maneuver battalions to a great extent. Refresher training was conducted on a weekly basis and inspected by commanders and staff representatives to insure that emphasis was being placed on combat techniques as directed by the Brigade Commander. Lack of formal training schedules and reports have increased the amount of beneficial training and eliminated the previous false reporting system.

## 7. (U) LOGISTICS

a. General: During the period 1 May through 30 Jun, the First Recondo Brigade continued operations mainly in Dinh Tuong, and Kien Phong Province, with one operation in Hoc Hoa, Kien Tuong Province. The battalion base camps were located at Fire Support Base Moore, Fire Support Base Schroeder, Fire Support Base Duke and Fire Support Base Danger. The Brigade Headquarters and Staff were located at Fire Support Base Moore, with the Logistic Support coming from Dong Tam Base Camp. Resupply and Logistic Support was accomplished through the use of battalion organic vehicles and division vehicular, air and riverine assets from the Division Army Aircraft Element and Division on Support Command.

b. Supply: While in these three provinces, the supporting units were located in Dong Tam Base. When an operation was taking place in Kien Tuong Province, the air support and class I, III, and V was airlifted to the center of operations at

~~CONFIDENTIAL~~

SUBJECT: Operational Report for Quarterly Period Ending 30 June 1969 (RCS/CSFOR-65) (UIC - WDFEIO) (U)

Poc Hoa. Available class II and IV supplies were also utilized. Fire Support Base Moore in Cai Lay District. Fire Support Base Danger in Giao Duc District, and Fire Support Base Duke in Vinh Kim Sub-Sector all utilized aerial and logistical support from Dong Tam. Aerial Operations also used class III and V support from supply bases at Kim Vinh and My Phuc Tay. Class I, II, III and IV were provided by 9th S&T Battalion and class V from Division Ammunition Office.

Direct Support units were Alpha Company, 15th Engineer Battalion; Bravo Company, 9th S&T Battalion; Headquarters and Alpha Company, 9th Medical Battalion; Charlie Company, 709th Maintenance Battalion; Alpha Company, 86th Engineer Battalion; and Bravo Company, 93rd Engineer Battalion; all of which are based in Dong Tam.

c. Maintenance: The quality of maintenance increased with the addition of highly trained personnel and command emphasis in equipment serviceability. All of the units had their annual CMI and passed. The serviceability profile in all units was C-1 rating and a serviceability profile 85 05 10.

d. Base Development: During the last two months several buildings have been completed in the rear areas. The 6th Battalion 31st Infantry completed a mess hall and 2nd Battalion, 30th Infantry is building revetments around all its billets for added personnel protection.

Most of the construction took place at Fire Support Base Moore with the construction of a mess hall, a chapel, a theater, a communication bunker, a briefing room, an S-1, S-5 building, and a Headquarters Company bunker. This was all built by Alpha Company, 15th Engineer Battalion.

## 8. (C) PSYOPS AND CIVIL AFFAIRS

### a. PSYOPS

(1) PSYOPS during the reporting period were increased significantly due to maximum utilization of all resources available, to include, ground troops, air assets and all milcap operations.

(2) More emphasis has been placed on maximum aerial delivered PSYOPS coverage on all intelligence targets, as well as PSYOPS included in all tactical operations. Using hand held loudspeakers and hand dissemination of leaflets by ground troops.

(3) A joint operations center, with the 7th ARVN Division and Dinh Tuong Province was established in My Tho in support of an accelerated Chieu Hoi Campaign.

~~CONFIDENTIAL~~

SUBJECT: Operational Report for Quarterly Period Ending 30 June 1969 (RCS/CSFOR-65) (UIC - WDFZTO) (U)

Additional PSYOPS assets were directed toward two target battalions for the purpose of inducing large scale or unit defection. Main objectives of PSYOPS during the reporting period were to increase defection from enemy ranks and to improve GVN and allied images. From 15 June through 30 June, maximum efforts were directed to the support of the 9th Infantry Division Redeployment PSYOPS Campaign.

(4) Recapitulation of PSYOPS

(a) Leaflets (Air)	15,300,000
(b) Leaflets (Ground)	750,000
(c) Loudspeaker (Air)	125 Hours
(d) Loudspeaker (Ground)	775 Hours
(e) Quick Reaction Missions	6

b. MILITARY CIVIC ACTION

(1) Civic action operations increased during reporting period with the greatest increases being in medical treatment.

a. Construction civic action projects were completed in support of lines of communication, education, social welfare and economic improvements.

b. Medical attention was offered to a large segment of the civilian populace and a number of handicapped individuals were given corrective operations and rehabilitation.

c. The most extensive civic action project during the reporting period was at the Cai Ne Hospital. This hospital serves approximately a quarter million people in western Dinh Tuong Province. However, it was in deplorable condition. The building, an old school house, is pitifully overcrowded and lacks the flexibility to separate the maternity ward from the contagious disease ward. The hospital is augmented by a volunteer team of one Indonesian Doctor and two Australian Nurses from the Asian Christian Service. The 1st Brigade has further augmented the staff with battalion medical personnel and supplies. A project of improvement of existing facilities is well underway. To this date, an underground water storage tank and several walls have been constructed and roof repair started. Materials for additional improvements are located at the hospital site and construction is progressing very rapidly.

(2) Recapitulations of Civic Action	
(a) Road improvement projects	11
(b) School repair	4
(c) English classes	10
(d) Electrification	1
(e) Agricultural projects	4
(f) Mileaps	1340
(g) Patients treated	71,100

c. LESSONS LEARNED

(1) Ground troops who disseminate leaflets should be briefed on PSYOPS objectives and specific target information prior to operations.

(2) Construction of community bulletin boards and posting with current information and progaganda, is a good method of dissemination and also adds creditability to messages.

9. (C) REGIONAL FORCE/POPULAR FORCE UPGRADING AND ARVN TRAINING:

During the reporting period a major effort has been made to conduct combined operations with Viet Namese military units. Each maneuver battalion established liaison with the adjacent district advisory elements and gave assistance in material and manpower in upgrading the units operational capabilities as well as improvement of the patrol bases. At the close of the reporting period efforts were being made to establish priorities for assisting various district forces as recommended by the Provincial Senior US Advisor.

10. (C) ENGINEER SUPPORT: - to be submitted under separate cover.

11. (C) SIGNAL SUPPORT:

The principal means of communications within the brigade and with higher headquarters for this period has been FM radio. From the problems within the Brigade headquarters have been few in comparison to the maneuver battalions. The battalions experienced the most difficulty with VHF units either on/or rather close to their assigned frequency. The VHF support of the 9th Signal battalion has again been

~~CONFIDENTIAL~~

outstanding. The AN/MGC-34 teletype has been working very well. We have experienced little difficulty with the AN/GRC-142 radio-teletype set. This has been due largely to the fine support from the 709th Maintenance Battalion.

12. (C) ARMY AVIATION:

a. The First Brigade Aviation Section (ANTEATERES) has provided daily air support by using four (4) Light Observation Helicopters, OH-6A. The missions assigned include: command and control, visual reconnaissance, courier, personnel transportation, and minor re-supply. On several occasions, emergency medical evacuation missions were performed and, in several cases, lives were saved as a result. During this reporting period 3080 sorties were flown, 4643 passengers were transported, and the section flew 652 hours in support of the Reconno Brigade.

b. Assault Helicopter Company (AHC): Daily use of an AHC enabled the Reconno Brigade to respond quickly to all enemy activity within the Tactical Area of Interest (TAOI). The "jitterbugging" concept has been further developed and is routine with all infantry elements of the brigade.

13. (U) CHEMICAL OPERATIONS: No chemical operations were conducted.

14. (U) BASE DEVELOPMENT: See para 7 (LOGISTICS)

SECTION II

LESSONS LEARNED: COM A DM'S OBSERVATIONS, EVALUATIONS, AND RECOMMENDATIONS.

1. (U) PERSONNEL: None

2. (C) OPERATIONS:

a. Parakeet Operations:

OBSERVATION: The use of Parakeet operations has proven quite effective in detecting and destroying enemy personnel during first hours and last hours of day light.

EVALUATION: The Parakeet operation uses a 6 man Ranger Team, 1 UH-1D slick, 2 cobra gunships. Once a target is observed the operation is conducted like an airmobile raid, using a quick insertion of the Rangers, who strike the target and then extract. The gunships provide additional fire power to sustain the operation.

~~CONFIDENTIAL~~

RECOMMENDATION: Continue to develop this technique and make its results known to other US and ARVN Units.

b. Regimental Joint sized Operations:

OBSERVATION: The employment of mixed American/ARVN Units has proven quite effective in developing a better understanding between the two armies.

EVALUATION: The Reconco Brigade has conducted two types of operations with the 12th ARVN Regiment, headquartered at Cai Be. The results have been 73 VCX, 9 wpns captured, 1 Hoi Chan, 3 PW's, and numerous booby traps and bunkers destroyed. The ARVN troops knowing the area of operation has prevented many US casualties by knowing that the area is booby trapped and in addition having the knowledge of the enemy base areas.

RECOMMENDATIONS: Continue to employ joint operations on a more frequent basis and make the results known to other US and ARVN Units.

c. Claymore Ambush

OBSERVATION: The role of claymore mines in ambush have proved very effective.

EVALUATION: The ambush is set up with claymores at strategic locations along canals or trails. Sampans or troops, several minutes apart are not alerted to the presence of the ambush unit in the area because they are accustomed to sporadic artillery fire and sky spot air strikes making another explosion, a normal occurrence. The claymore is also much more effective than small arms. To prevent compromise of position, small arms are used only as a last resort.

RECOMMENDATION: Continue to develop this technique and make results known to other US and ARVN Units.

d. Return of Detainees to Brigade IPW

OBSERVATION: Some detainees have been released in the field as civilians.

EVALUATION: In the guerilla type warfare encountered in the Delta, it is often impossible to distinguish the VC from a civilian by means of dress, age, papers or sex. Many VC have been discovered with legitimate GVN identification papers. On several occasions personnel have been released in the field only to discover at a later date that a VC has slipped through.
